

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Yellow
- Elbow Angle: Yellow
- Wrist Deviation: Green
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Green
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 6

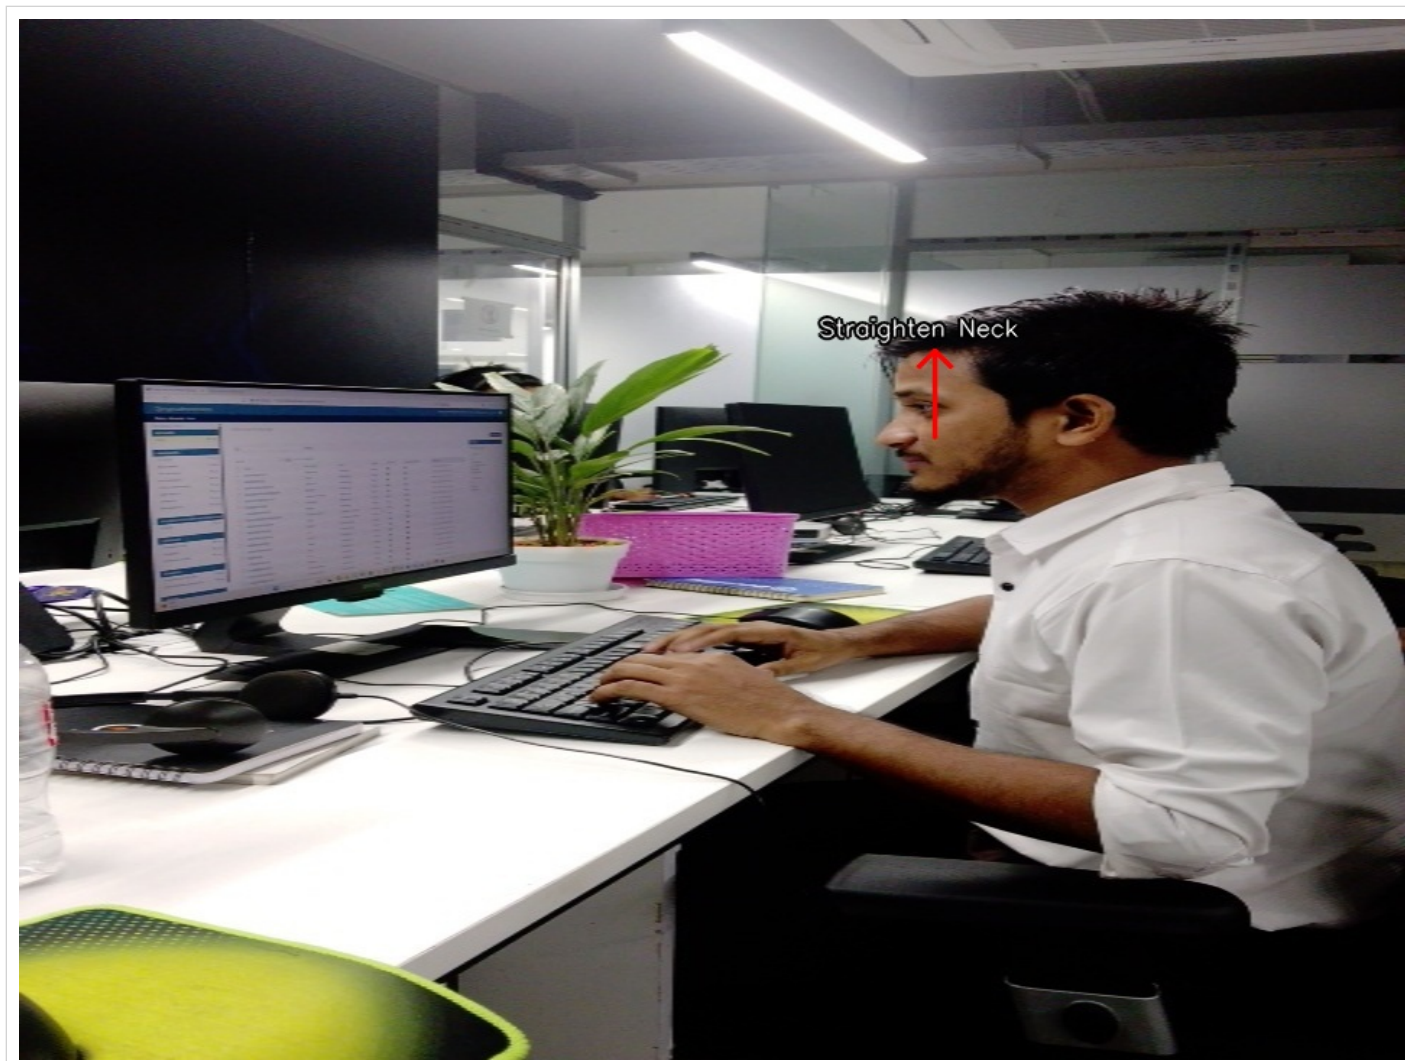

Main Pain Region(s): Neck, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head balanced directly over your shoulders. Avoid bending your neck forward; keep your chin parallel to the floor. Adjust your gaze so your eyes look straight ahead at the screen.
- Correct Pelvic Tilt: Sit with your hips fully back in the chair and your lower back supported. Keep your pelvis neutral (not tilting forward or backward excessively) to maintain the natural curve of your spine.
- Relax Shoulder Elevation: Let your shoulders drop naturally and avoid hunching them upwards. Keep your arms relaxed at your sides with elbows close to your body.
- Optimize Chair Support: Use a chair with proper lumbar support to help maintain a neutral pelvic position and reduce upper back and neck strain.
- Adjust Desk Height: Ensure your desk height allows your elbows to rest at a 90–110° angle, with forearms parallel to the floor and wrists straight.

Final Advice

Your assessment shows significant ergonomic risks, especially for neck, upper back, and wrists/hands. Address posture and workstation issues promptly to reduce pain and prevent further strain. If symptoms persist or worsen, consult a healthcare professional.
