

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Yellow
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 6

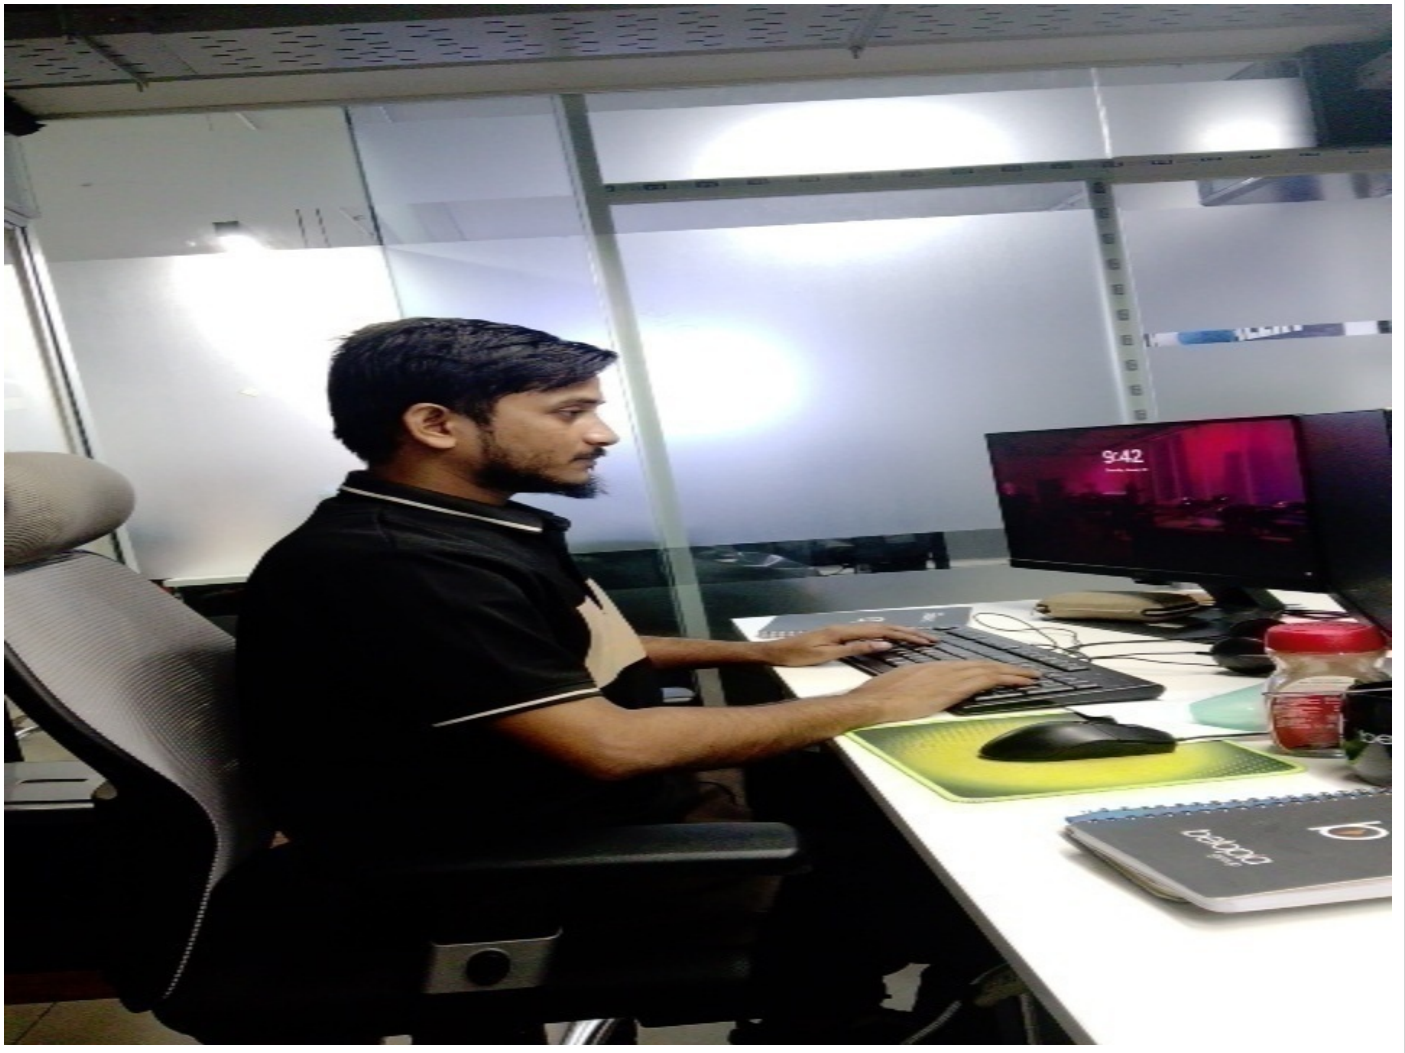

Main Pain Region(s): Neck, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Correct Pelvic Tilt: Sit with your hips fully back in the chair and ensure your pelvis is neutral (not tilted forward or backward). Use the chair's backrest to support your lower back and keep both feet flat on the floor.
- Reduce Shoulder Elevation: Relax your shoulders and keep them level. Adjust your armrests or desk height so your shoulders are not raised while typing or using the mouse.
- Neutral Wrist Position: Keep your wrists straight and aligned with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or sideways.
- Raise Monitor Height: Adjust your monitor so that the top of the screen is at or just below your eye level. This will help you maintain a neutral neck posture and reduce upper back and neck strain.
- Adjust Chair for Pelvic Support: Set your chair height so your feet are flat on the floor and your knees are level with your hips. Use a lumbar support cushion if needed to maintain the natural curve of your lower back.

Final Advice

Your assessment shows high risk for upper back and neck strain, with significant workstation violations. Address monitor height and pelvic support immediately. If pain persists or worsens, consult a healthcare professional.
