

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Green
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green
- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 8

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head balanced directly over your shoulders. Avoid bending your neck forward; keep your chin level and eyes looking straight ahead.
- Correct Elbow Angle: Adjust your arm position so your elbows are bent at approximately 90–100°, close to your body, and your forearms are parallel to the floor.
- Neutral Pelvic Position: Sit with your hips fully back in the chair and your pelvis neutral (not tilted forward or backward). Your thighs should be parallel to the floor.
- Raise Monitor Height: Elevate your laptop or monitor so the top of the screen is at or just below eye level. Use a stable riser or stack of books if needed.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Place them at elbow height to maintain a neutral wrist and elbow posture.

Final Advice

Your upper back pain is severe and your workstation setup is causing significant ergonomic risks, especially for your neck and elbows. Prioritize raising your monitor, using an external keyboard/mouse, and improving your sitting posture. Perform the recommended exercises regularly and consider the suggested equipment for long-term relief. If pain persists or worsens, consult a healthcare professional.
