

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Green
- Pelvic Tilt: Yellow

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 6

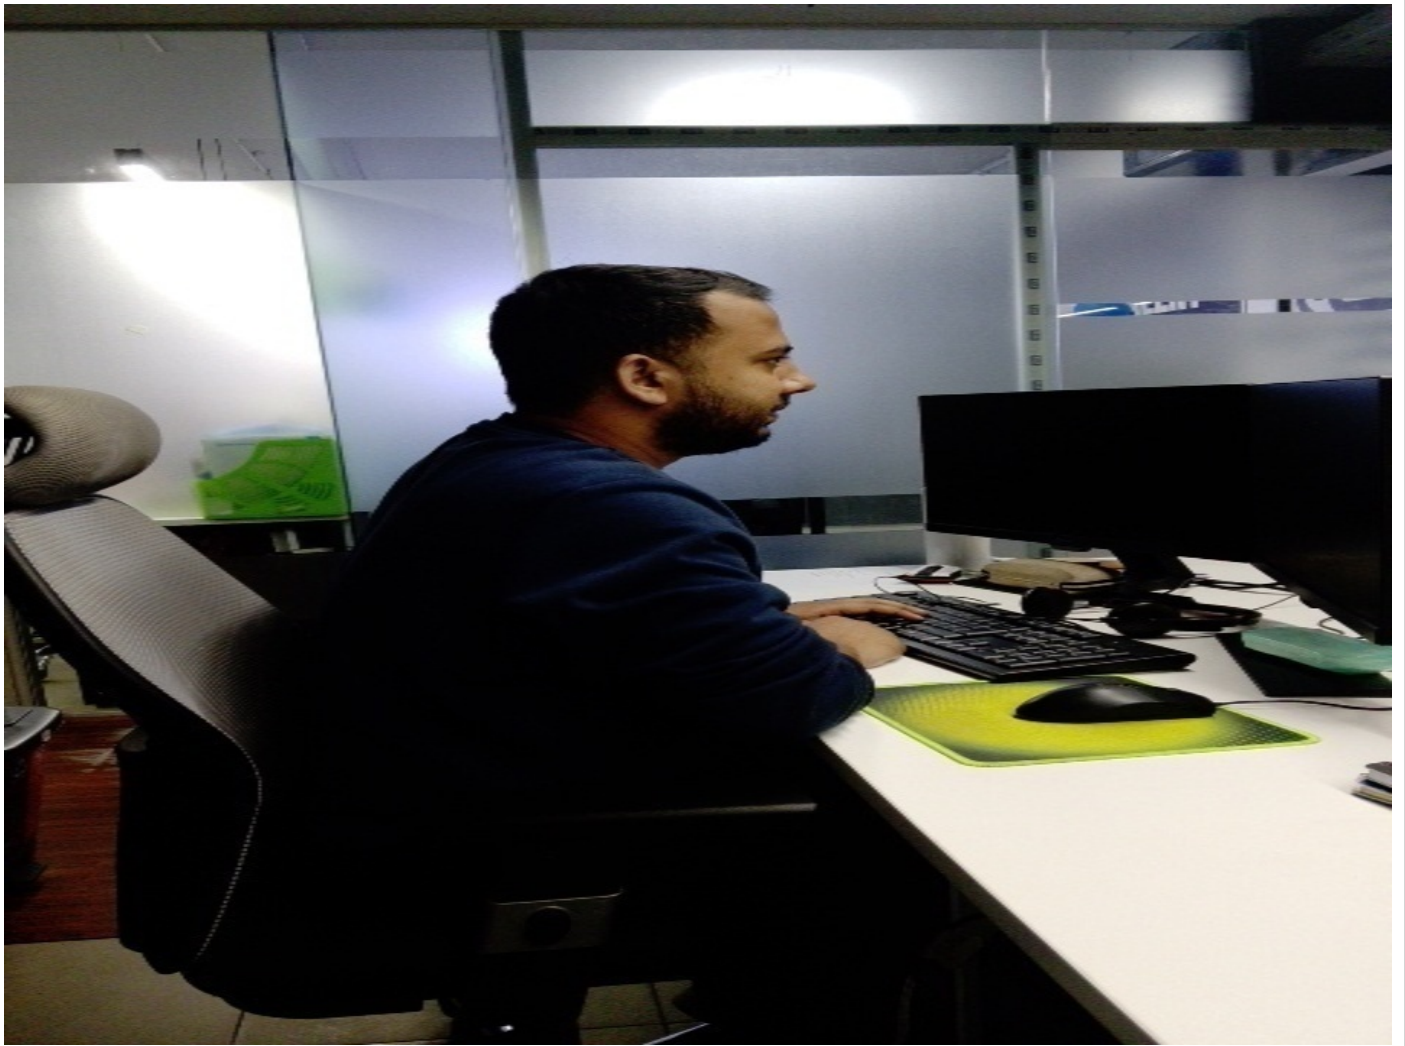

Main Pain Region(s): Neck (VAS 8)

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders and your chin parallel to the floor. Avoid bending your neck forward; instead, keep your gaze straight ahead at eye level.
- Optimize Pelvic Position: Sit with your hips fully back in the chair and maintain a slight natural curve in your lower back. Avoid slouching or tilting your pelvis forward excessively.
- Maintain Neutral Elbow Angle: Keep your elbows close to your body and bent at approximately 90 degrees. Adjust your chair or desk height so your forearms are parallel to the floor.
- Raise Monitor Height: Elevate your monitor so the top edge is at or just below eye level. This will help reduce neck flexion and prevent forward head posture.
- Adjust Chair and Desk Height: Ensure your chair and desk allow your elbows to rest comfortably at a 90-degree angle, with your forearms parallel to the floor and wrists in a neutral position.
- Support Lower Back: Use a lumbar support cushion or adjust your chair's lumbar support to maintain the natural curve of your lower back and reduce pelvic tilt.

Final Advice

Your assessment shows significant ergonomic risks, especially for your neck and upper back. Prioritize raising your monitor and supporting your lower back. Perform the recommended exercises regularly and consider the suggested equipment for substantial improvement. If pain persists or worsens, consult a healthcare professional.
