

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Correct Elbow Angle: Adjust your sitting position so that your elbows are bent at approximately 90–100°, with your forearms parallel to the floor. Avoid extending your elbows outward or upward, as this increases strain on your shoulders and upper back.
- Neutral Wrist Alignment: Keep your wrists straight and in line with your forearms when typing or using the mouse. Avoid bending your wrists up, down, or to the sides to reduce strain and tingling sensations.
- Reduce Pelvic Tilt: Sit with your hips and pelvis in a neutral position, ensuring your lower back maintains its natural curve. Avoid slouching or tilting your pelvis forward excessively.
- Lower Shoulder Elevation: Relax your shoulders and keep them level, not hunched or raised. Adjust your armrests or desk height to prevent your shoulders from lifting while working.
- Raise Monitor Height: Elevate your monitor so that the top of the screen is at or just below eye level. This will help you maintain a neutral neck posture and reduce upper back and neck strain.
- Adjust Armrest or Desk Height: Set your armrests or desk height so your elbows rest comfortably at a 90–100° angle, with your shoulders relaxed and wrists straight.

Final Advice

Your assessment shows significant ergonomic risks, especially for your upper back, shoulders, and wrists, with high pain intensity and ISO 9241-5 violations. Prioritize monitor height, elbow and wrist alignment, and consider equipment upgrades. If pain persists or worsens, consult a healthcare professional.
