Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Green
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green
- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 8

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head balanced directly above your shoulders. Avoid bending your neck forward; keep your chin parallel to the floor.
- Correct Elbow Angle: Adjust your arm position so your elbows are bent at approximately 90–100°, keeping your forearms parallel to the floor and close to your body.
- Neutral Pelvic Position: Sit with your pelvis in a neutral position—avoid slouching or tilting your pelvis forward. Your hips should be level with or slightly higher than your knees.
- Raise Monitor Height: Elevate your laptop or monitor so the top of the screen is at or just below eye level. This prevents neck flexion and reduces strain.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Position them so your elbows remain at a 90–100° angle and wrists stay neutral.

Final Advice

Your workstation setup is causing significant upper back and neck strain, with high risk for elbow discomfort due to poor arm positioning. Prioritize raising your monitor, using an external keyboard and mouse, and supporting your lower back. Perform the recommended exercises regularly and reassess your setup after making these changes. If pain persists or worsens, consult a healthcare professional.
