Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Yellow

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 6

Main Pain Region(s): Elbows/Forearms (VAS 8)

Posture & Ergonomic Corrections

- **Correct Elbow Angle:** Adjust your sitting position so your elbows are bent at approximately 90–100°, with forearms parallel to the floor and close to your body. Avoid fully extending your arms while typing or using the mouse.
- **Neutral Wrist Position:** Keep your wrists straight and aligned with your forearms while typing or using the mouse. Avoid bending your wrists upwards or sideways.
- **Upright Pelvis Alignment:** Sit with your pelvis in a neutral position, avoiding excessive forward or backward tilt. Your hips should be level with or slightly higher than your knees.
- **Bring Keyboard and Mouse Closer:** Position your keyboard and mouse so they are close enough to allow your elbows to remain at a 90–100° angle, reducing arm extension and upper back strain.
- **Laptop Height Adjustment:** Use a laptop stand or stack books to raise your laptop screen so the top of the screen is at or just below eye level, minimizing neck flexion.

Final Advice

Your upper back pain is severe and your elbow posture is a high-risk concern. Prioritize adjusting your workstation and posture as soon as possible. If pain or tingling worsens or persists, consult a healthcare professional.
