

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Red
- Elbow Angle: Yellow
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Yellow
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

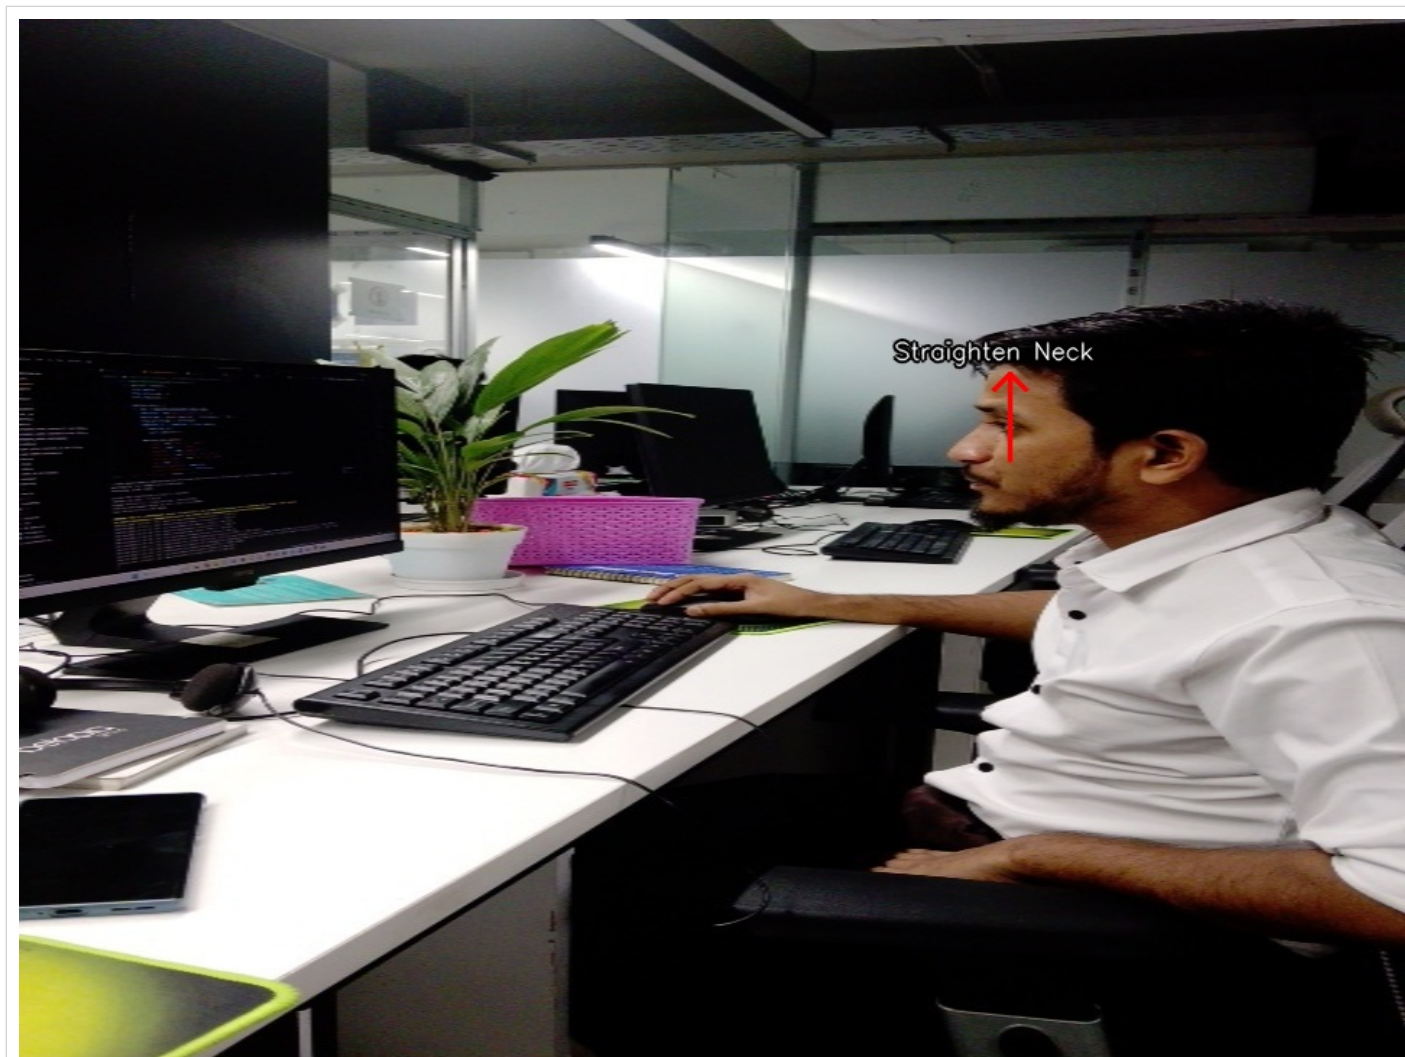

Main Pain Region(s): Neck, Shoulders, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head balanced directly over your shoulders. Avoid bending your neck forward; your chin should be parallel to the floor.
- Lower Shoulder Elevation: Relax your shoulders so they are not hunched or raised. Keep your upper arms close to your body and elbows at your sides.
- Correct Pelvic Tilt: Sit with your hips fully back in the chair and your pelvis in a neutral position. Use the chair's backrest for support to maintain a natural curve in your lower back.
- Raise Monitor Height: Adjust your monitor so the top of the screen is at or slightly below eye level. This will help you maintain a neutral neck posture.
- Optimize Keyboard and Mouse Position: Position your keyboard and mouse at elbow height and close to your body to minimize reaching and wrist deviation.

Final Advice

Your current posture and workstation setup are causing significant strain, especially to your neck, upper back, and wrists. Immediate ergonomic adjustments and regular exercises are essential to reduce pain and prevent further issues. If symptoms persist or worsen, consult a healthcare professional.
