

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Yellow

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands (VAS 8)

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright and adjust your gaze so your neck remains neutral, minimizing forward bending. Keep your chin parallel to the floor and avoid looking down at your screen.
- Correct Elbow Angle: Position your elbows at a 90–100° angle by lowering your chair or raising your desk/laptop. Keep your forearms parallel to the floor and close to your body.
- Neutral Wrist Position: Keep your wrists straight and avoid bending them upwards or sideways while typing. Align your hands with your forearms.
- Raise Laptop Screen: Use a laptop stand or stack books to elevate your laptop so the top of the screen is at eye level. This reduces neck flexion and upper back strain.
- External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Place them at elbow height to allow your wrists and elbows to remain in a neutral position.
- Adjust Chair Height: Set your chair height so your elbows are at a 90–100° angle and your feet are flat on the floor. This helps maintain proper posture and reduces strain on your shoulders and lower back.

Final Advice

Your current setup is causing significant neck, upper back, and wrist strain. Prioritize raising your screen and using an external keyboard/mouse. Perform recommended exercises regularly and adjust your workstation as advised to reduce pain and prevent further injury.
