

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Yellow

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands (VAS 8)

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; keep your chin parallel to the floor and your gaze straight ahead.
- Correct Elbow Angle: Adjust your arm position so that your elbows are bent at approximately 90-100°, keeping them close to your body and relaxed at your sides.
- Neutral Wrist Position: Keep your wrists straight and aligned with your forearms. Avoid bending or twisting your wrists while typing or using the mouse.
- Raise Screen Height: Elevate your laptop screen so the top edge is at or just below eye level. Use a monitor riser or stack books to achieve this.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Position them so your wrists remain straight and your elbows are at a comfortable angle.
- Adjust Chair Height: Set your chair height so your feet are flat on the floor and your knees are at or slightly below hip level. This helps maintain a neutral pelvic tilt.

Final Advice

Your current posture and workstation setup present significant ergonomic risks, especially to your neck, wrists, and upper back. Prioritize raising your screen, using external input devices, and performing the recommended exercises regularly. If pain persists or worsens, consult a healthcare professional.
