

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Yellow
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, keep your chin parallel to the floor and look straight ahead.
- Correct Wrist Position: Keep your wrists in a neutral, straight position while typing or using the mouse. Avoid bending them up, down, or to the sides.
- Neutral Pelvic Alignment: Sit with your hips and pelvis level, not tilted forward or backward. Your thighs should be parallel to the floor, and your feet flat.
- Lower Shoulder Elevation: Relax your shoulders and keep them down, away from your ears. Adjust your chair or armrests so your shoulders remain relaxed.
- Raise Monitor Height: Elevate your laptop screen or use an external monitor so the top of the screen is at or just below eye level. This reduces neck flexion.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Position them so your wrists remain straight and your elbows are at a 90-degree angle.
- Adjust Chair Height and Support: Set your chair height so your feet are flat on the floor and your thighs are parallel to the ground. Use a lumbar support cushion if needed.

Final Advice

Your current posture and workstation setup are causing significant ergonomic risks, especially to your neck and wrists. Immediate adjustments and regular exercises are strongly recommended to reduce pain and prevent further injury. If symptoms persist or worsen, consult a healthcare professional.
