

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Green
- Pelvic Tilt: Red

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 7

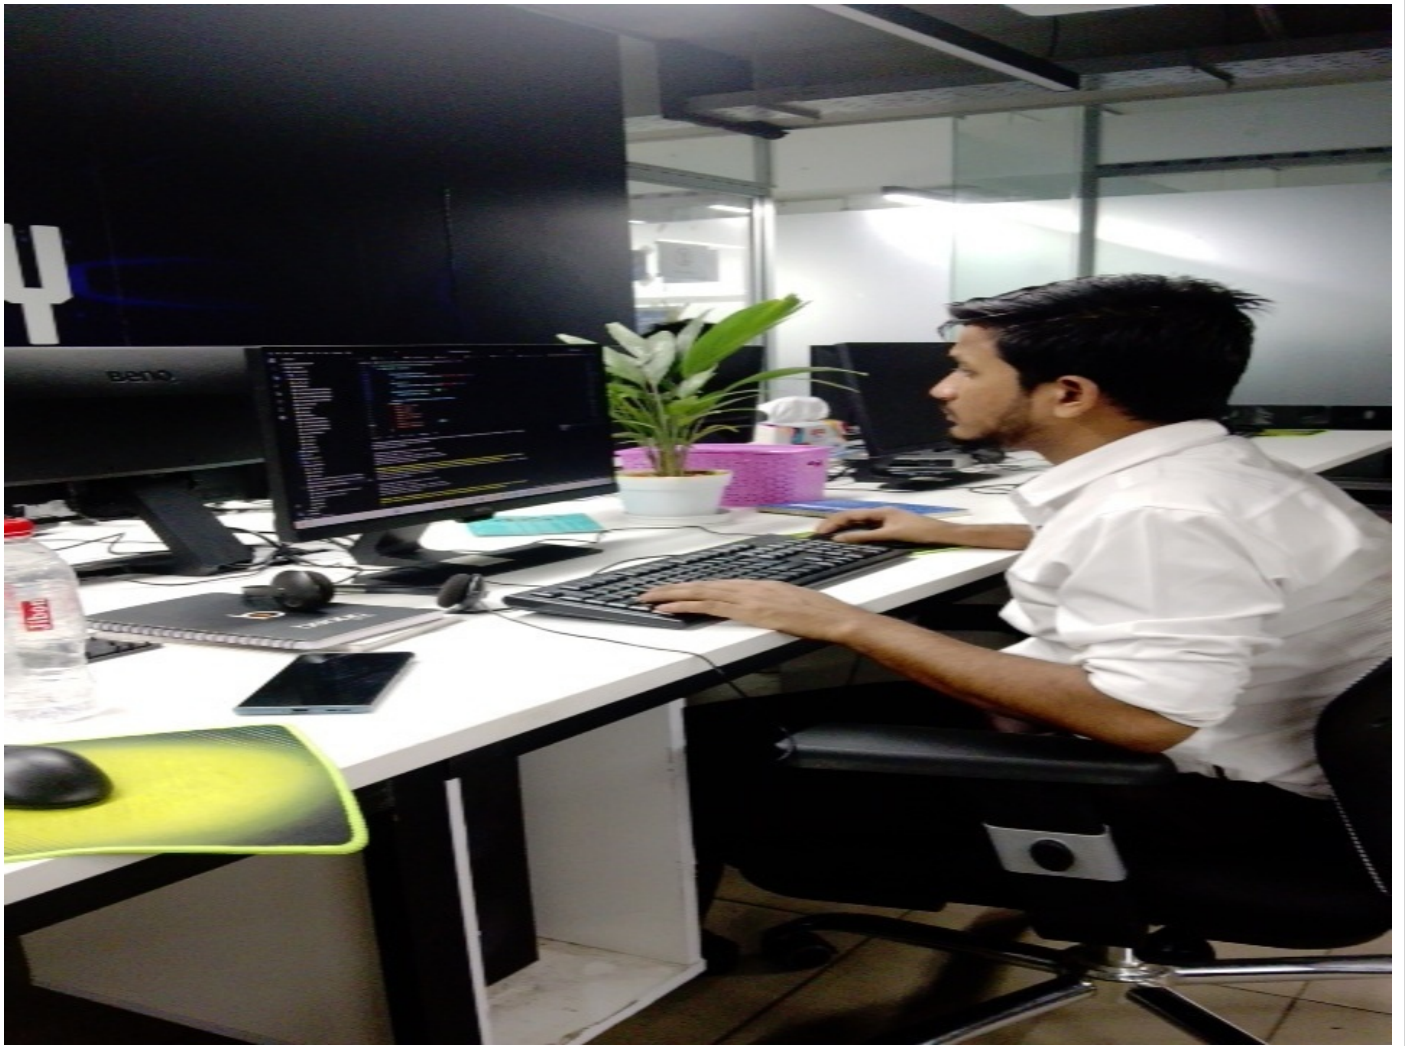

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, keep your chin parallel to the floor and look straight ahead.
- Lower Shoulder Elevation: Relax your shoulders and let them drop naturally. Avoid hunching or raising your shoulders while typing or using the mouse.
- Correct Elbow Angle: Adjust your arm position so your elbows are bent at approximately 90 degrees and kept close to your body, not extended outward.
- Neutral Pelvic Position: Sit with your hips and pelvis upright, ensuring your lower back maintains a slight natural curve. Avoid slouching or tilting your pelvis excessively.
- Raise Monitor Height: Elevate your monitor so the top of the screen is at or just below eye level. This will help reduce neck flexion and prevent forward head posture.
- Adjust Chair Height and Armrests: Set your chair height so your feet are flat on the floor and your elbows are at a 90-degree angle. Adjust armrests so your shoulders remain relaxed and elbows supported.
- Support Lower Back: Use a lumbar support cushion or adjust your chair's lumbar support to maintain the natural curve of your lower back and minimize pelvic tilt.

Final Advice

Your workstation and posture present high ergonomic risks, especially for your wrists/hands, shoulders, and lower back. Immediate adjustments and equipment upgrades are strongly recommended to reduce pain and prevent further injury. If symptoms persist or worsen, consult a healthcare professional.
