

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Green
- Pelvic Tilt: Red

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, keep your gaze straight ahead with your chin slightly tucked.
- Lower Shoulder Elevation: Relax your shoulders and allow them to drop naturally. Keep your arms close to your sides, avoiding any shrugging or lifting of the shoulders while typing or using the mouse.
- Correct Elbow Angle: Adjust your chair and desk height so your elbows are bent at approximately 90°, with your forearms parallel to the floor and wrists straight.
- Neutral Pelvic Position: Sit back fully in your chair with your pelvis neutral—not tilted forward or backward. Ensure your lower back is supported to maintain the natural curve of your spine.
- Raise Monitor Height: Elevate your monitor so the top edge is at or just below eye level. This will reduce the need to bend your neck forward.
- Adjust Chair Height and Armrests: Set your chair height so your feet are flat on the floor and your elbows are at desk height. Adjust armrests so your shoulders remain relaxed and elbows are supported at 90°.
- Improve Lumbar Support: Add a lumbar cushion or adjust your chair's lumbar support to maintain the natural curve of your lower back and prevent excessive pelvic tilt.

Final Advice

Your workstation and posture present significant ergonomic risks, especially for your wrists/hands and neck. Immediate adjustments and targeted exercises are strongly recommended to reduce pain and prevent further injury. If symptoms persist or worsen, consult a healthcare professional.
