

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

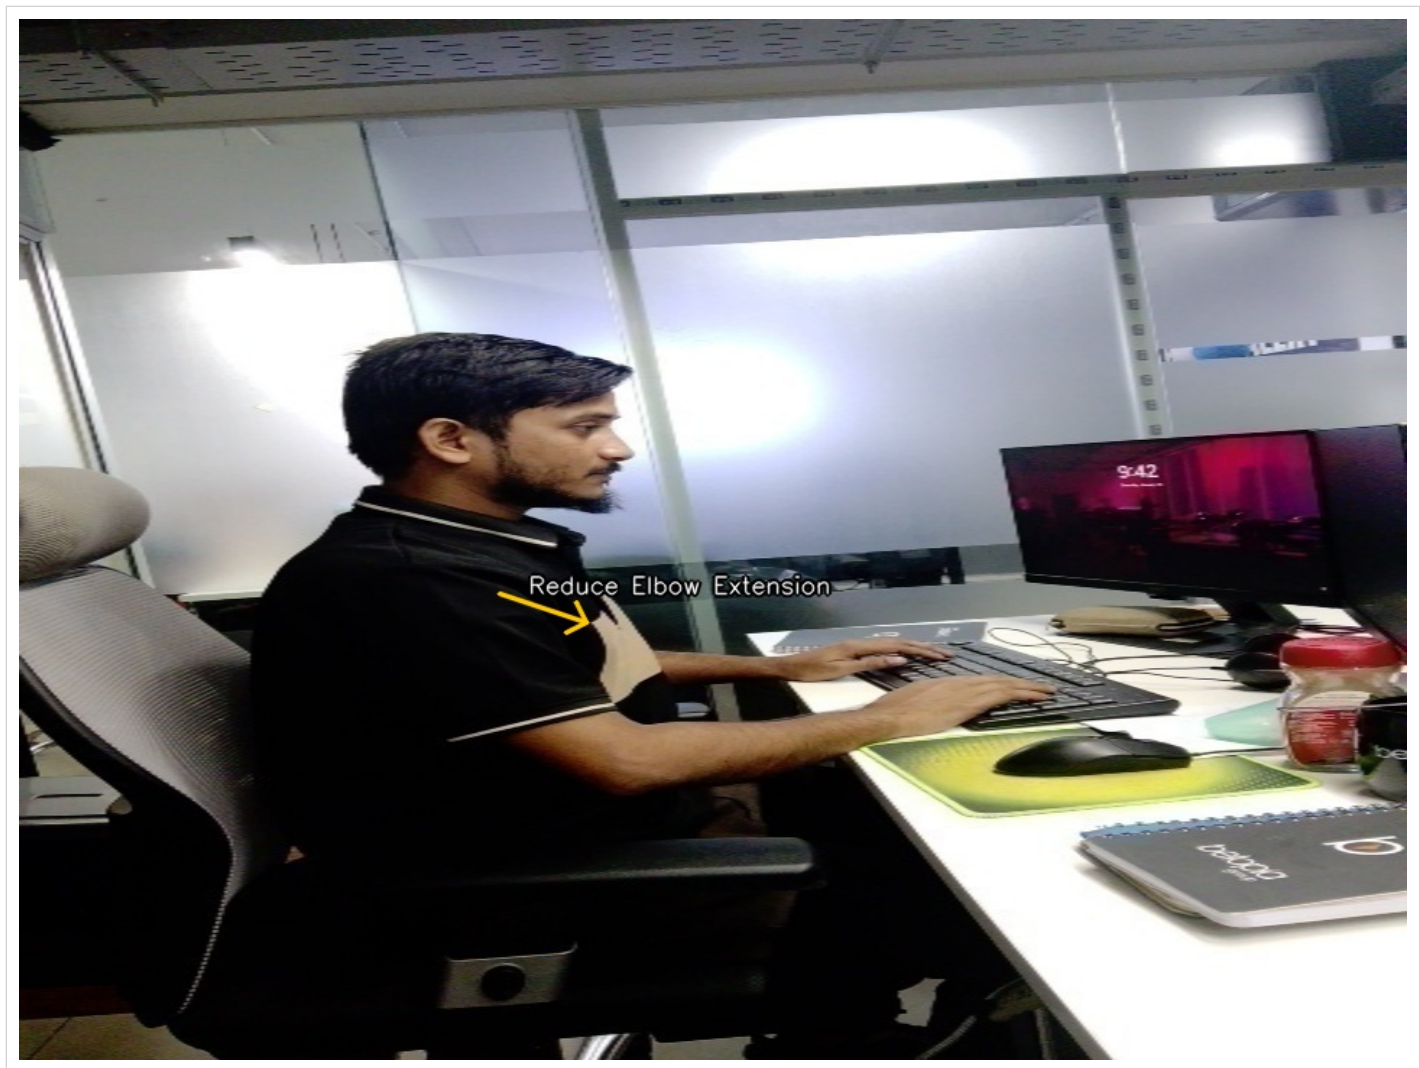

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce elbow angle to 100°: Adjust your chair and armrests so your elbows are bent at approximately 100°, keeping your forearms parallel to the desk and close to your body. This reduces strain on your upper back and shoulders.
- Decrease pelvic tilt to under 10°: Sit back fully in your chair with your pelvis neutral, using lumbar support if needed, to maintain a pelvic tilt below 10°. This helps prevent upper and lower back discomfort.
- Lower shoulder elevation below 5°: Relax your shoulders and adjust armrests so your shoulders are not hunched or elevated, aiming for less than 5° elevation. This reduces tension in the neck and shoulders.
- Raise monitor by 25 cm: Increase your monitor height by 25 cm so the top of the screen is at or just below eye level. This aligns with ISO 9241-5 and reduces neck flexion and upper back strain.

Final Advice

Your assessment shows high risk for upper back and lower back strain, with moderate risk for neck and shoulders. Immediate workstation adjustments and regular ergonomic exercises are strongly recommended. If pain persists or worsens, consult a healthcare professional.
