

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Green
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 8

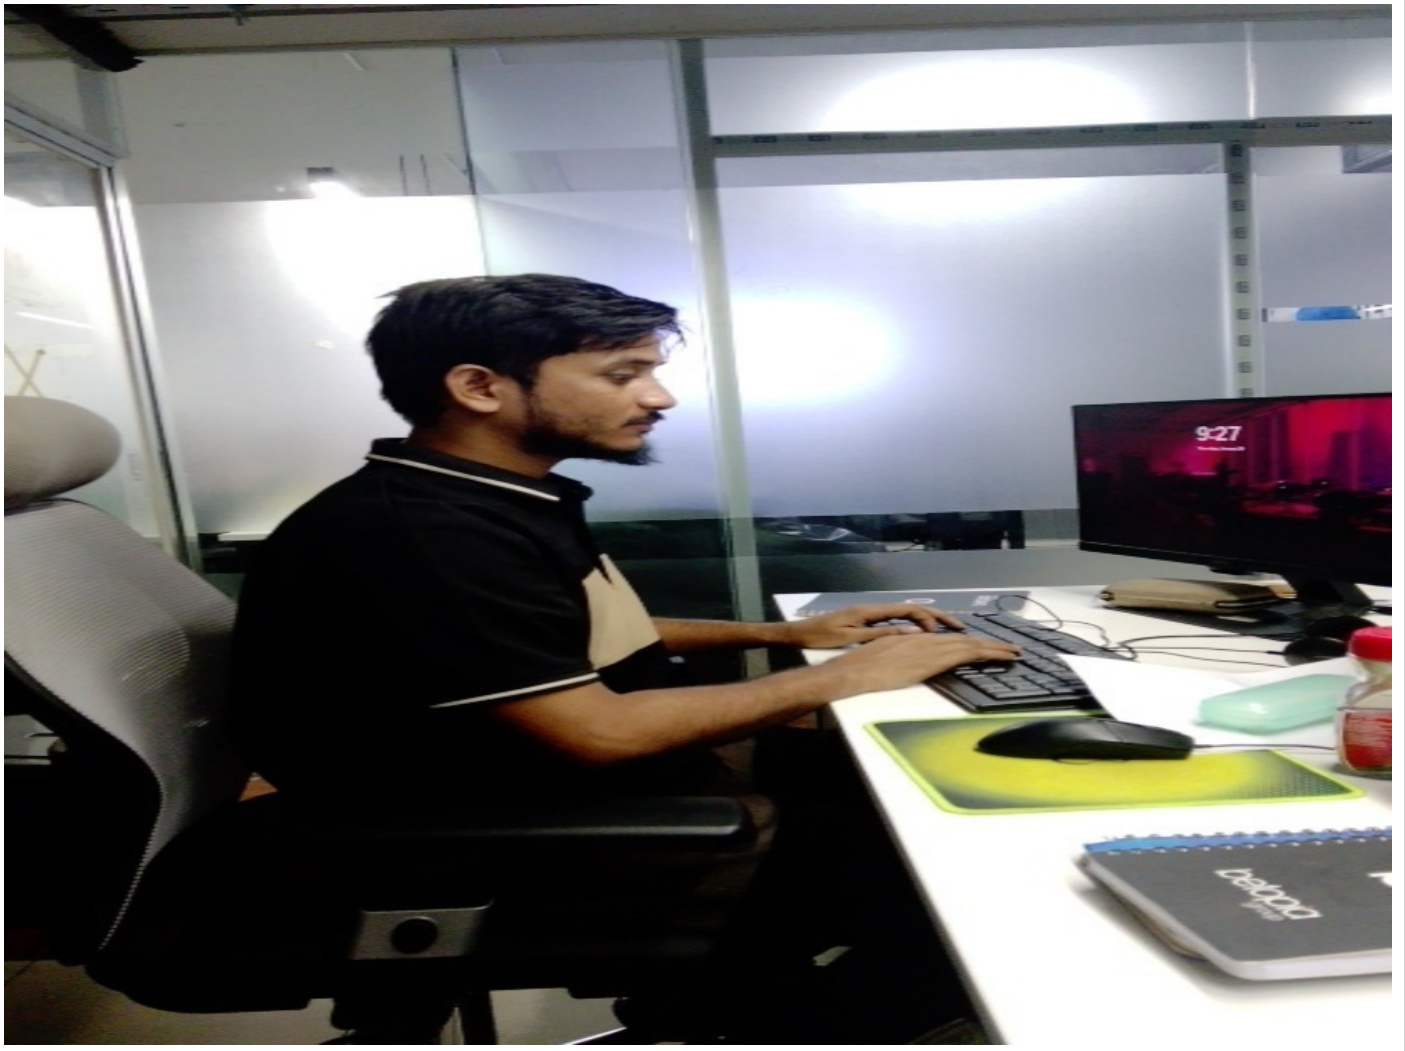

Main Pain Region(s): Elbows/Forearms, Wrists/Hands, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce elbow angle to 100 degrees: Adjust your chair and armrest height so your elbows are bent at approximately 100°, keeping your forearms parallel to the desk surface. This reduces excessive extension and shoulder strain.
- Align wrists to neutral position: Reposition your keyboard and mouse so your wrists remain straight (0° deviation) while typing and using the mouse. Avoid any upward or sideways bending.
- Decrease pelvic tilt to under 10 degrees: Sit fully back in your chair with your pelvis upright. Adjust your seat pan and lumbar support so your pelvis tilts no more than 10° forward, supporting your lower back.
- Raise chair seat to 46 cm: Increase your chair height so your feet are flat on the floor and your thighs are parallel to the ground, helping to achieve the correct elbow and pelvic angles.
- Move keyboard 8 cm closer: Bring your keyboard 8 cm closer to the edge of your desk to reduce overreaching, helping maintain a 100° elbow angle and neutral wrist position.

Final Advice

Your assessment shows high ergonomic risk, especially for upper back, wrists, and lower back. Immediate workstation adjustments and targeted exercises are strongly recommended. If pain or tingling worsens or persists, consult a healthcare professional.
