

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Yellow

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands (VAS 8)

Posture & Ergonomic Corrections

- Reduce neck flexion to under 5°: Sit upright and adjust your gaze so your neck bends no more than 5° forward. Keep ears aligned with shoulders and avoid leaning head down.
- Correct elbow angle to 90–110°: Position your arms so elbows are bent between 90° and 110°, keeping forearms parallel to the floor and close to your body.
- Align wrists to neutral (0–10°): Keep wrists straight and in line with forearms while typing or using the mouse. Avoid bending wrists up, down, or sideways.
- Reduce pelvic tilt to under 5°: Sit with hips level and back against the chair. Adjust seat pan and lumbar support to minimize pelvic tilt.
- Raise monitor by 10 cm: Elevate your monitor so the top edge is at or just below eye level, reducing neck flexion to under 5°.
- Move keyboard 8 cm closer: Position your keyboard so your elbows remain at 90–110° and wrists stay neutral, minimizing reach and wrist extension.
- Adjust chair height to 45 cm: Set your chair seat height so feet are flat on the floor, thighs parallel, and hips at or slightly above knee level.

Final Advice

Your current posture and workstation setup present high ergonomic risks, especially for your neck, wrists, and elbows. Prioritize correcting neck flexion and wrist alignment immediately. Implement the recommended workstation adjustments and exercises daily. If pain or tingling worsens or persists, consult a healthcare professional.
