

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Green
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 7

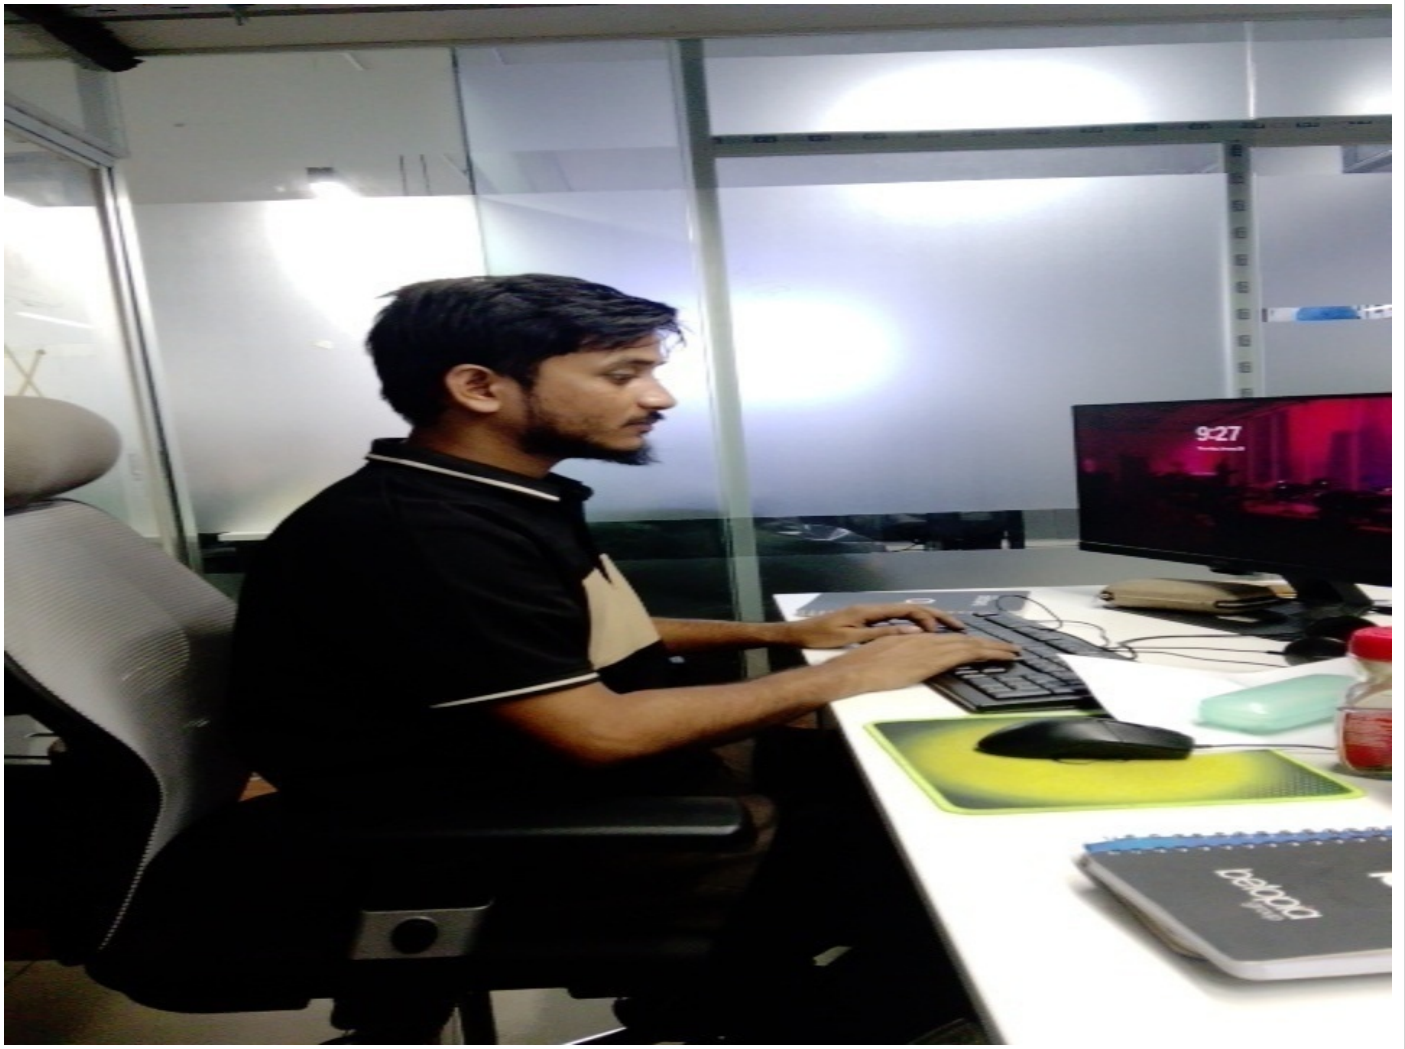

Main Pain Region(s): Wrists/Hands, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Straighten wrists to neutral (0° deviation): Keep wrists straight and aligned with forearms while typing or using the mouse. Avoid bending wrists sideways or upwards. Adjust hand position so wrists remain in a neutral, flat posture.
- Reduce pelvic tilt to 0–10°: Sit with hips and pelvis upright, not tilted forward or backward. Adjust your sitting posture so your lower back maintains a natural curve and your pelvis is neutral, reducing excessive tilt.
- Open elbow angle to 100°: Relax arms so elbows are bent at approximately 100°, not more than 120°. Adjust arm position and chair height to achieve this angle, keeping forearms parallel to the floor.
- Raise chair seat to 46 cm: Increase chair height so that your elbows are at or just above desk level, allowing for a 100° elbow angle and relaxed shoulders.
- Lower keyboard by 5 cm: Position the keyboard so it is lower and closer to your lap, allowing your wrists to remain straight and elbows to open to 100°.
- Add lumbar support cushion (10 cm depth): Place a lumbar cushion with 10 cm depth at your lower back to maintain neutral pelvic tilt and support the natural curve of your spine.

Final Advice

Your pain intensity and duration indicate a high risk of musculoskeletal injury. Please consult a healthcare professional for a comprehensive assessment. Implement the above corrections and exercises, but seek medical advice if symptoms persist or worsen.
