

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

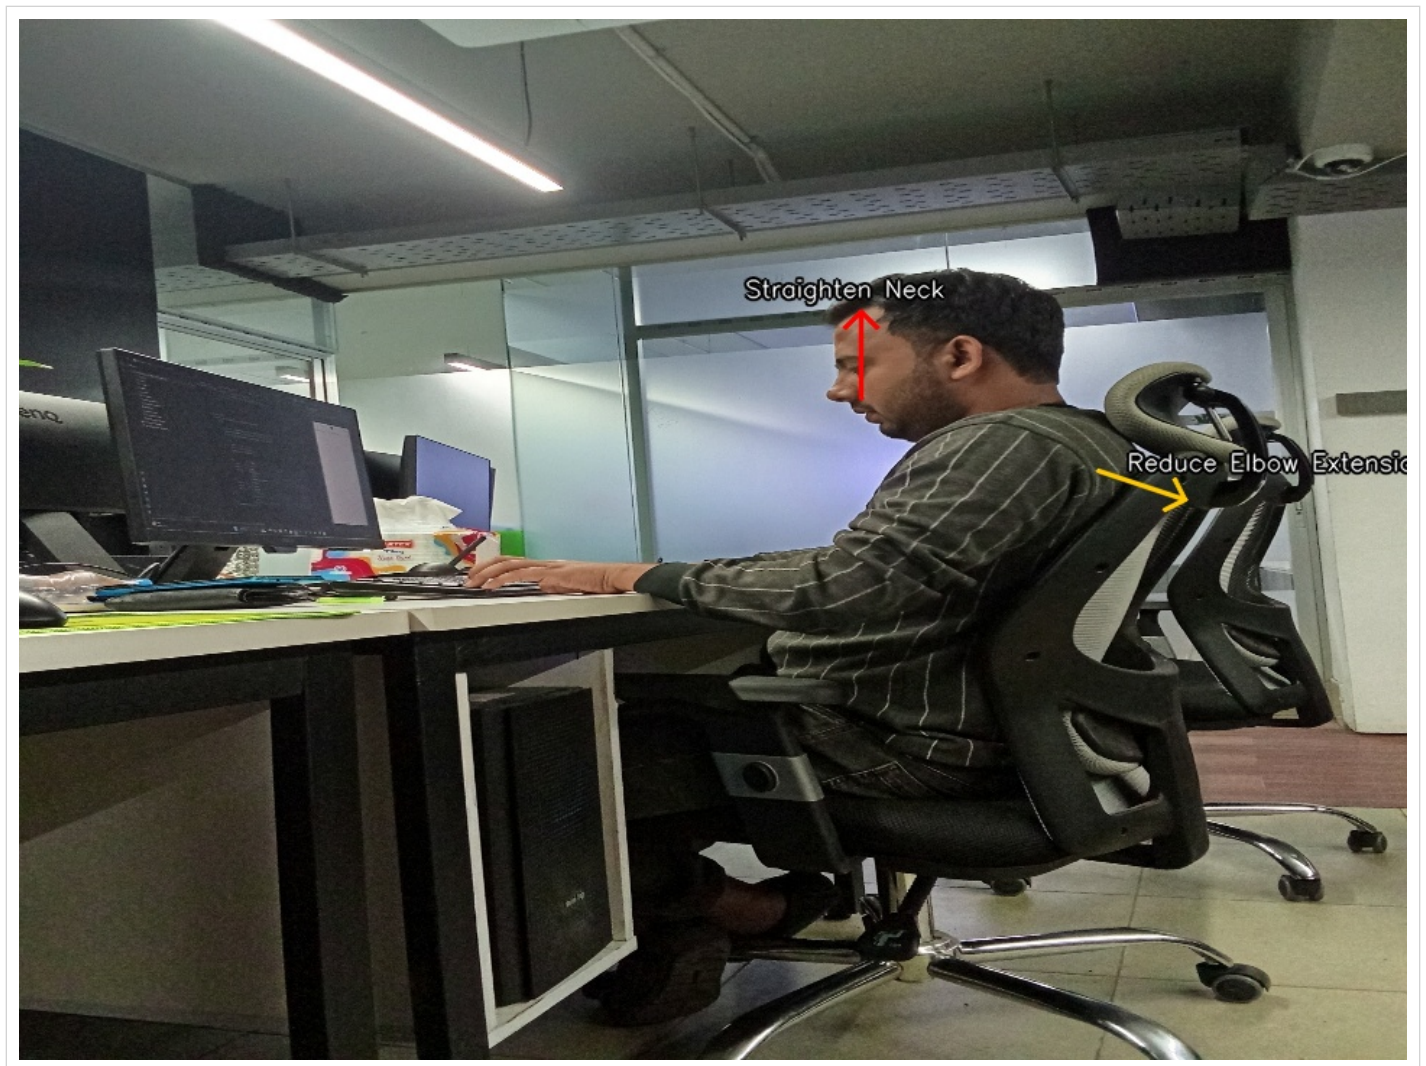

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Raise monitor by 18 cm: Elevate your monitor so the top edge is at or just below eye level. This will reduce neck flexion from 65° to the ISO-recommended 0–20° range.
- Lower elbow angle to 100 degrees: Adjust your chair and desk height so your elbows are bent at 90–110°, reducing strain from the current 155° extension.
- Reduce wrist deviation to under 5 degrees: Reposition your keyboard and mouse so your wrists remain straight, minimizing deviation from the current 12° to within ISO limits.
- Correct pelvic tilt to 0–10 degrees: Sit with your hips back in the chair and use lumbar support to reduce pelvic tilt from 63° to the ISO-recommended neutral position.
- Raise chair seat to 46 cm: Increase your chair height so your elbows are at desk level and your feet remain flat on the floor, supporting a 90–110° elbow angle.
- Move keyboard 8 cm closer: Bring your keyboard closer to your body to reduce arm extension and wrist deviation, supporting a relaxed shoulder and elbow posture.

Final Advice

Your current workstation and posture present severe ergonomic risks, especially to your neck, wrists, and lower back. Immediate corrective action is required to prevent further injury. Please implement the corrections and equipment recommendations above. If symptoms persist or worsen, consult a healthcare professional.
