

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

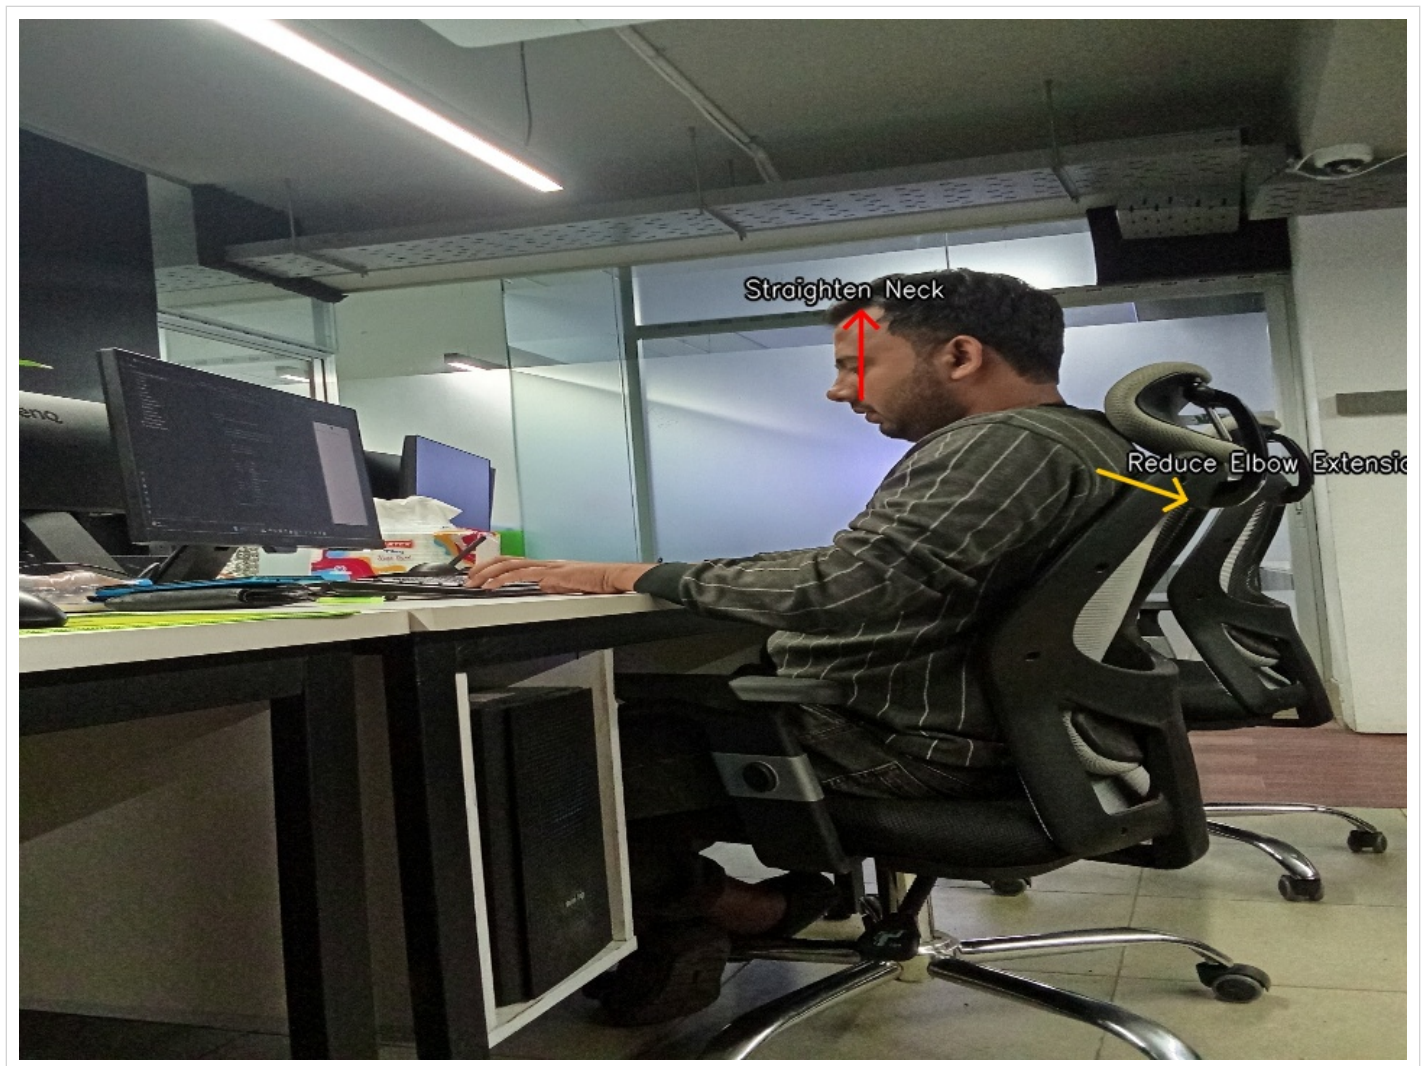

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Raise monitor by 18 cm: Elevate your monitor so the top edge is at or just below eye level, reducing neck flexion from 65° to under 20° as per ISO 9241-5.
- Bend elbows to 90–110 degrees: Adjust your arm position and chair height so elbows are bent between 90–110°, not 155°, to minimize strain and comply with ISO 9241-5.
- Reduce wrist deviation to under 5°: Keep wrists straight while typing and using the mouse, aiming for less than 5° deviation to prevent nerve compression.
- Sit with pelvis upright at 0–10° tilt: Adjust your sitting posture so your pelvis is upright, not tilted at 63°, to support spinal alignment and reduce lower back stress.
- Raise chair seat to 46 cm: Increase your chair height so your elbows are level with the desk, supporting a 90–110° elbow angle.
- Move keyboard 8 cm closer: Position your keyboard so your forearms are parallel to the floor and wrists remain neutral, reducing overreaching.

Final Advice

Your pain intensity and posture deviations are severe (red flag). Please consult a healthcare professional immediately for assessment of possible nerve involvement. Do not delay seeking medical attention.
