

## Ergonomics Evaluation Report

### Posture Analysis

---

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

### Workstation Analysis

---

- Chair: SeatDepth: Green

### Pain & Risk Summary

---

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

### Posture & Ergonomic Corrections

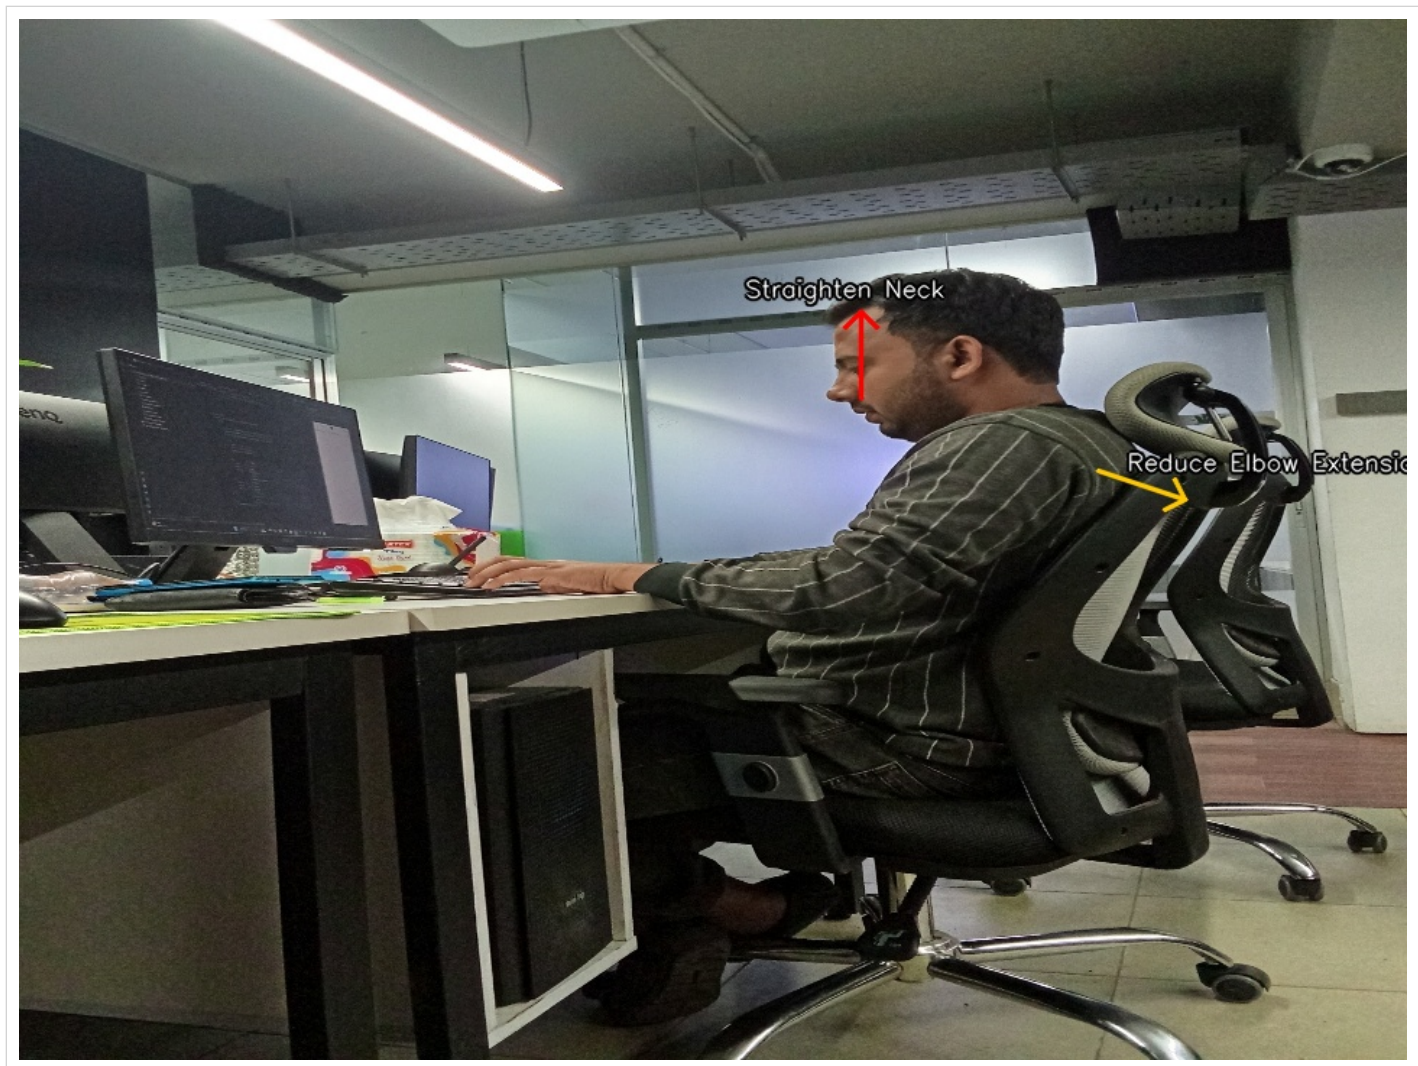

---

- Raise monitor by 18 cm: Elevate your monitor so the top edge is at or just below eye level. This will reduce neck flexion from 65° to the ISO-recommended 0–20° range.
- Bend elbows to 90–110 degrees: Adjust your chair and desk height so your elbows are bent between 90–110°, reducing strain from the current 155° extension.
- Reduce wrist deviation to under 5 degrees: Align your keyboard and mouse so your wrists remain straight, minimizing deviation from the current 12° to within ISO limits (<5°).
- Sit with pelvis upright at 0–10 degrees: Adjust your sitting posture and use lumbar support to reduce pelvic tilt from 63° to the ISO-recommended upright position.
- Raise chair seat to 46 cm: Increase your chair height so your feet are flat on the floor and your elbows are at desk height, supporting a 90–110° elbow angle.
- Move keyboard 8 cm closer: Bring your keyboard closer to your body to reduce arm extension and maintain proper elbow and wrist alignment.

### Final Advice

---

Your current posture and workstation setup present severe ergonomic risks, especially for your neck, wrists, and lower back. Immediate corrections are required to prevent further injury. Please consult a healthcare professional if symptoms persist or worsen.
