

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Yellow risk
- Elbow Angle: Red risk
- Wrist Deviation: Yellow risk
- Pelvic Tilt: Red risk

Workstation Analysis

Monitor:

- MonitorHeight: Green risk
- ViewingDistance: Green risk

Risk Summary

No risk summary available.

Pain & Risk Summary

Average Pain Level: VAS 6/10

Main Pain Region(s): Neck, Elbows/Forearms, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion

Sit upright with your head balanced directly over your shoulders. Avoid bending your neck forward; keep your chin parallel to the floor. Adjust your posture so your neck flexion is less than 20° as per ISO 9241-5.

- Correct Elbow Angle

Position your elbows so they are bent at approximately 90–110°, close to your body. Avoid extending your arms forward or outward excessively to reduce strain on your shoulders and elbows.

- Neutral Pelvic Position

Sit with your hips and pelvis in a neutral position, avoiding excessive forward tilt. Ensure your lower back is supported and your thighs are parallel to the floor.

- Adjust Chair Height and Depth

Set your chair height so your feet are flat on the floor and your knees are at or slightly below hip level. Adjust

seat depth so your lower back is supported and there is a 2–3 finger gap behind your knees.

- Optimize Armrest Position

Adjust armrests so your shoulders remain relaxed and elbows are supported at a 90–110° angle. Armrests should be at the same height as your desk surface.

Final Advice

Your assessment shows significant ergonomic risks, especially for your neck and lower back. Prioritize posture corrections and workstation adjustments to reduce pain and prevent further strain. Perform the recommended exercises regularly, and consider adding lumbar support and improved armrests for optimal comfort. If pain persists or worsens, consult a healthcare professional. Safety note: Stop exercises if you feel sharp pain or discomfort.
