

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Red risk
- Wrist Deviation: Yellow risk
- Pelvic Tilt: Red risk

Workstation Analysis

- Chair: SeatDepth: Green risk

Pain & Risk Summary

Average Pain Level: VAS 7/10

Main Pain Region(s): Neck, Elbows/Forearms, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion

Sit upright with your head balanced directly over your shoulders. Avoid bending your neck forward; instead, keep your chin parallel to the floor and your gaze straight ahead.

- Correct Elbow Angle

Adjust your sitting position so your elbows are bent at approximately 90–100°, with your forearms parallel to the floor and close to your body.

- Neutral Wrist Position

Keep your wrists straight and aligned with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or sideways.

- Pelvic Alignment

Sit with your hips and pelvis in a neutral position, avoiding excessive forward or backward tilt. Your thighs should be parallel to the floor, and your feet flat.

- Raise Monitor Height

Position your monitor so the top of the screen is at or just below eye level. This will reduce the need to bend your neck forward.

- Adjust Keyboard and Mouse Placement

Place your keyboard and mouse at elbow height and close enough so you can keep your elbows at a 90–100°

angle and your wrists straight.

- Check Chair Height and Support

Ensure your chair height allows your feet to rest flat on the floor and your thighs to be parallel to the ground. Use lumbar support to maintain pelvic alignment.

Final Advice

Your assessment shows severe neck flexion, excessive pelvic tilt, and high upper back pain. Immediate workstation adjustments and posture corrections are critical. If pain persists or worsens, consult a healthcare professional.
