

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Red risk
- Wrist Deviation: Yellow risk
- Pelvic Tilt: Red risk

Workstation Analysis

- Chair: SeatDepth: Green risk

Pain & Risk Summary

Average Pain Level: VAS 7

Main Pain Region(s): Neck, Elbows/Forearms, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion

Sit upright with your head balanced directly over your shoulders, keeping your chin level. Avoid bending your neck forward; instead, bring your screen up to eye level to maintain a neutral neck position.

- Correct Elbow Angle

Adjust your arm position so your elbows are bent at approximately 90–100°, with your forearms parallel to the floor and close to your body. Avoid extending your arms forward or outward excessively.

- Minimize Wrist Deviation

Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or to the sides.

- Neutral Pelvic Position

Sit with your pelvis in a neutral position, avoiding excessive forward or backward tilt. Your hips should be level, and your lower back should retain a slight natural curve.

- Raise Monitor Height

Use a monitor riser or stack stable objects under your monitor so the top of the screen is at or just below eye level. This will help reduce neck flexion and upper back strain.

- Adjust Chair Height and Armrests

Set your chair height so your feet are flat on the floor and your elbows are at a 90–100° angle when typing.

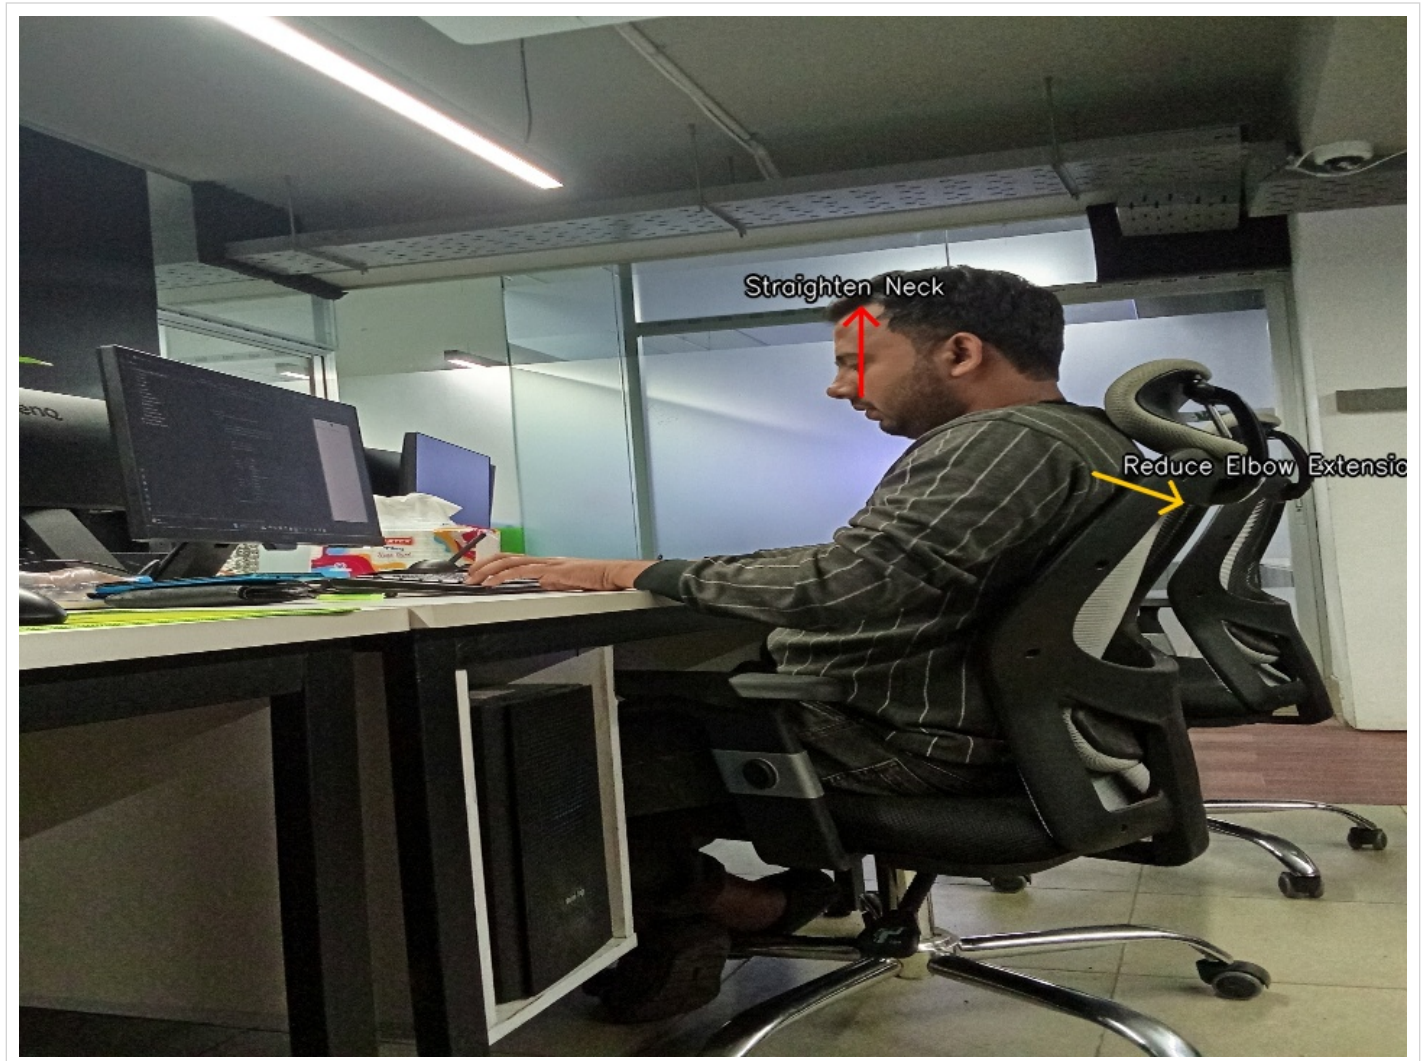

Adjust armrests (if available) to support your forearms without elevating your shoulders.

- Keyboard and Mouse Placement

Position your keyboard and mouse close to your body and at the same height as your elbows to minimize reaching and wrist deviation.

Final Advice

Your current workstation setup is causing severe neck flexion and upper back pain, which are high-priority risks. Immediate adjustment of monitor height and posture is critical. Follow the recommended corrections and exercises, and consider equipment upgrades to reduce strain. If pain persists or worsens, consult a healthcare professional.
