

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Yellow risk
- Wrist Deviation: Red risk
- Pelvic Tilt: Green risk

Workstation Analysis

- Chair: SeatDepth: Green risk

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion

Sit upright with your ears aligned over your shoulders. Avoid bending your neck forward; instead, bring your screen to eye level so your gaze is straight ahead.

- Neutral Wrist Alignment

Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists upward or sideways.

- Optimize Elbow Angle

Adjust your chair and desk height so your elbows are bent at approximately 90–100°, with your forearms parallel to the floor and close to your body.

- Raise Monitor Height

Use a monitor riser or stack books under your laptop to elevate the screen so the top is at or just below eye level, reducing neck flexion.

- Use External Keyboard and Mouse

Connect an external keyboard and mouse to your laptop to allow for neutral wrist positioning and proper elbow angles.

Final Advice

Your workstation setup is causing significant neck, upper back, and wrist strain, especially due to excessive neck

flexion and wrist deviation. Prioritize raising your screen and using external input devices. Perform the recommended exercises regularly and consider the suggested equipment to reduce pain and prevent further issues. If upper back pain persists or worsens, consult a healthcare professional.
