

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Red risk
- Wrist Deviation: Yellow risk
- Pelvic Tilt: Red risk

Workstation Analysis

- Chair: SeatDepth: Green risk

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

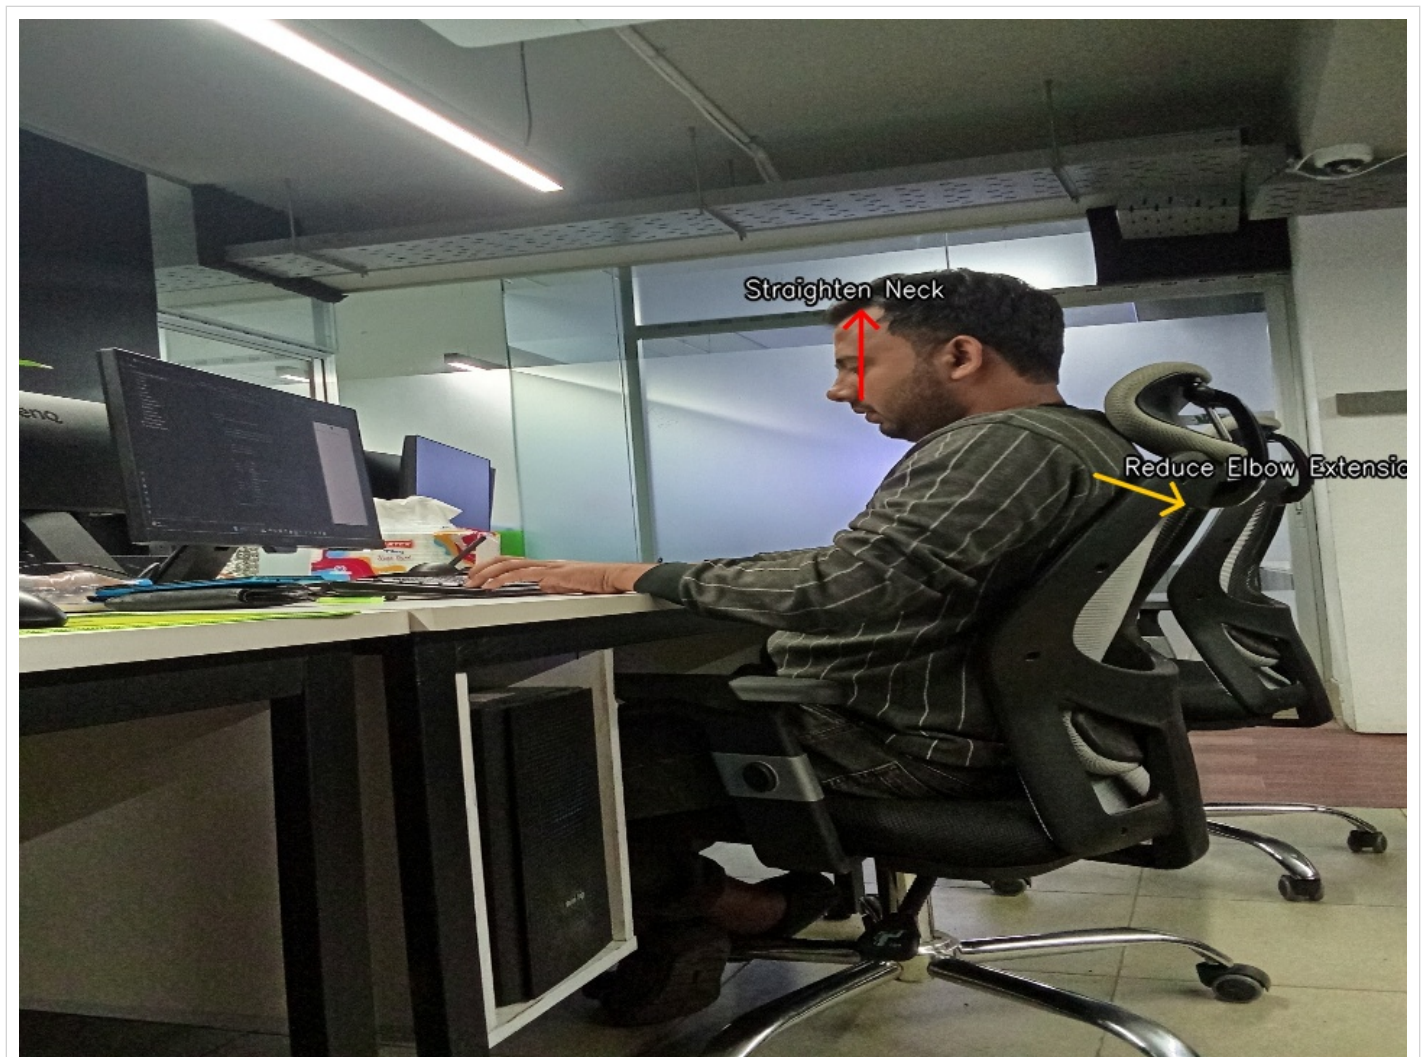

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, keep your chin parallel to the floor and look straight ahead.
- Correct Elbow Angle: Adjust your arm position so your elbows are bent at approximately 90–100°, keeping your forearms parallel to the floor and close to your body.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or to the sides.
- Pelvic Alignment: Sit with your hips and pelvis neutral, not tilted forward or backward. Your thighs should be parallel to the floor, and your feet flat.
- Raise Monitor Height: Elevate your monitor so the top edge is at or just below eye level. This will help you maintain a neutral neck posture and reduce excessive neck flexion.
- Adjust Chair Height and Armrests: Set your chair so your elbows are at desk height, allowing your forearms to rest comfortably. Adjust armrests (if available) to support your arms without lifting your shoulders.
- Keyboard and Mouse Placement: Position your keyboard and mouse close to your body and at elbow height to minimize wrist deviation and maintain a neutral arm posture.

Final Advice

Your assessment shows significant ergonomic risks, especially for your neck, upper back, and elbows. Prioritize correcting monitor height and arm positioning, and consider recommended equipment to reduce pain and

prevent further strain. If pain persists or worsens, consult a healthcare professional.
