

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Yellow risk
- Wrist Deviation: Red risk
- Pelvic Tilt: Green risk

Workstation Analysis

- Chair: SeatDepth: Green risk

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your ears aligned over your shoulders. Avoid bending your neck forward; keep your chin level and look straight ahead to minimize neck strain.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or to the sides.
- Optimal Elbow Angle: Adjust your sitting position so your elbows are bent at approximately 90–100 degrees, close to your body, to reduce upper limb fatigue.
- Raise Monitor Height: Elevate your laptop screen or use an external monitor so the top of the screen is at or just below eye level. This will help reduce neck flexion.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Position them so your wrists remain straight and your elbows stay close to your body.

Final Advice

Your workstation setup is causing significant upper back and wrist strain, with high neck flexion and wrist deviation. Prioritize raising your screen and using external input devices. Incorporate the recommended exercises and consider the equipment upgrades for substantial improvement. If upper back pain persists or worsens, consult a healthcare professional.
