

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Yellow risk
- Wrist Deviation: Red risk
- Pelvic Tilt: Green risk

Workstation Analysis

- Chair: SeatDepth: Green risk

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, keep your chin parallel to the floor and your gaze straight ahead.
- Neutral Wrist Alignment: Keep your wrists straight and level with your forearms while typing. Avoid bending them upwards or to the side.
- Optimize Elbow Angle: Adjust your sitting position so your elbows are bent at approximately 90–100 degrees, close to your body, and relaxed.
- Raise Laptop Screen: Use a laptop stand or stack books to elevate your laptop screen so the top is at or just below eye level, reducing neck flexion.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Position them so your wrists remain straight and your elbows are at a comfortable angle.

Final Advice

Your workstation setup is causing significant upper back and wrist strain, with moderate neck discomfort. Prioritize raising your screen and using external input devices to align with ISO 9241-5 standards. Perform recommended exercises regularly, and consider ergonomic equipment upgrades for lasting relief. If pain persists or worsens, consult a healthcare professional.
