

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Yellow risk
- Wrist Deviation: Red risk
- Pelvic Tilt: Green risk

Workstation Analysis

- Chair: SeatDepth: Green risk

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; keep your chin parallel to the floor and look straight ahead.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists upwards or sideways.
- Optimize Elbow Angle: Adjust your arm position so your elbows are bent at approximately 90–100 degrees, close to your body, to reduce strain on your forearms and upper back.
- Raise Monitor Height: Use a monitor riser or stack books under your laptop to bring the top of the screen to eye level. This will help reduce neck flexion and upper back strain.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Place them at a comfortable height to maintain neutral wrist and elbow positions.

Final Advice

Your posture and workstation setup are contributing to neck, upper back, and wrist discomfort. Prioritize raising your screen and using external input devices to reduce strain. Perform recommended exercises regularly and reassess your setup after making adjustments. If upper back pain persists or worsens, consult a healthcare professional.
