

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Yellow risk
- Wrist Deviation: Red risk
- Pelvic Tilt: Green risk

Workstation Analysis

- Chair: SeatDepth: Green risk

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, keep your chin parallel to the floor and look straight ahead.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing. Avoid bending or angling your wrists up, down, or sideways.
- Optimize Elbow Angle: Adjust your arm position so your elbows are bent at approximately 90–100 degrees, close to your sides, to minimize strain.
- Raise Monitor Height: Elevate your laptop screen so the top of the display is at or just below eye level. Use a monitor riser or stack books to achieve this.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Place them at elbow height to allow your wrists to remain straight and your elbows at a comfortable angle.

Final Advice

Your main ergonomic risks are excessive neck flexion and wrist deviation, which are contributing to your neck, upper back, and wrist pain. Prioritize raising your screen and using external input devices to achieve neutral postures. Perform the recommended exercises regularly and adjust your workstation as advised to reduce discomfort and prevent further strain.
