

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Yellow risk
- Wrist Deviation: Red risk
- Pelvic Tilt: Green risk

Workstation Analysis

- Chair: SeatDepth: Green risk

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright and adjust your gaze so your neck is in a neutral position, with your chin parallel to the floor. Avoid bending your neck forward when viewing your screen.
- Correct Wrist Position: Keep your wrists straight and aligned with your forearms while typing. Avoid bending your wrists upward or to the side.
- Optimize Elbow Angle: Adjust your chair or desk height so your elbows are bent at approximately 90–100°, keeping your forearms parallel to the floor.
- Raise Monitor Height: Use a monitor riser or stack books under your laptop to bring the top of the screen to eye level, reducing the need to bend your neck forward.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop to allow your wrists to remain straight and your elbows at a comfortable angle.

Final Advice

Your upper back pain is significant and your workstation setup is contributing to neck and wrist strain. Prioritize raising your screen and using external input devices. Perform the recommended exercises regularly, and if pain persists or worsens, consult a healthcare professional. Safety note: Stop any exercise if you experience sharp pain, numbness, or dizziness.
