

## Ergonomics Evaluation Report

### Posture Analysis

---

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Red risk
- Wrist Deviation: Yellow risk
- Pelvic Tilt: Red risk

### Workstation Analysis

---

- Chair: SeatDepth: Green risk

### Pain & Risk Summary

---

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

### Posture & Ergonomic Corrections

---

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; keep your chin parallel to the floor and your gaze straight ahead.
- Correct Elbow Angle: Adjust your arm position so your elbows are bent at approximately 90–100°, close to your sides, with forearms parallel to the floor.
- Neutral Wrist Position: Keep your wrists straight and aligned with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or to the sides.
- Pelvic Alignment: Sit with your pelvis in a neutral position, avoiding excessive forward or backward tilt. Your hips should be level, and your lower back supported.
- Raise Monitor Height: Elevate your monitor so the top of the screen is at or just below eye level. This will reduce the need to bend your neck forward.
- Adjust Chair Height: Set your chair height so your elbows are at desk level and your feet are flat on the floor. This will help maintain a proper elbow angle and pelvic alignment.
- Keyboard and Mouse Placement: Position your keyboard and mouse close to your body and at the same height as your elbows to minimize wrist deviation and shoulder strain.

### Final Advice

---

Your assessment shows significant ergonomic risks, especially for your neck, upper back, and elbows, with high pain intensity reported. Immediate workstation adjustments and posture corrections are strongly recommended.

If pain persists or worsens, consult a healthcare professional.
