

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Red risk
- Wrist Deviation: Yellow risk
- Pelvic Tilt: Red risk

Workstation Analysis

- Chair: SeatDepth: Green risk

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, keep your chin parallel to the floor and your gaze straight ahead.
- Correct Elbow Angle: Adjust your arm position so your elbows are bent at approximately 90–100°, with your forearms parallel to the floor and close to your body.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or sideways.
- Upright Pelvic Alignment: Sit with your pelvis in a neutral position, avoiding excessive forward or backward tilt. Your hips should be level and your lower back supported.
- Raise Monitor Height: Elevate your monitor so the top of the screen is at or just below eye level. This will help reduce neck flexion and upper back strain.
- Adjust Chair Height and Armrests: Set your chair height so your feet are flat on the floor and your elbows are at desk height. Adjust armrests (if available) to support your forearms without elevating your shoulders.
- Optimize Keyboard and Mouse Placement: Position your keyboard and mouse close to your body and at the same height as your elbows to maintain a neutral wrist and elbow posture.

Final Advice

Your current posture and workstation setup are causing significant strain, especially to your neck, upper back, and shoulders. Immediate ergonomic adjustments and regular exercises are strongly recommended to reduce

pain and prevent further injury. If pain persists or worsens, consult a healthcare professional.
