

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Red risk
- Wrist Deviation: Yellow risk
- Pelvic Tilt: Red risk

Workstation Analysis

- Chair: SeatDepth: Green risk

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

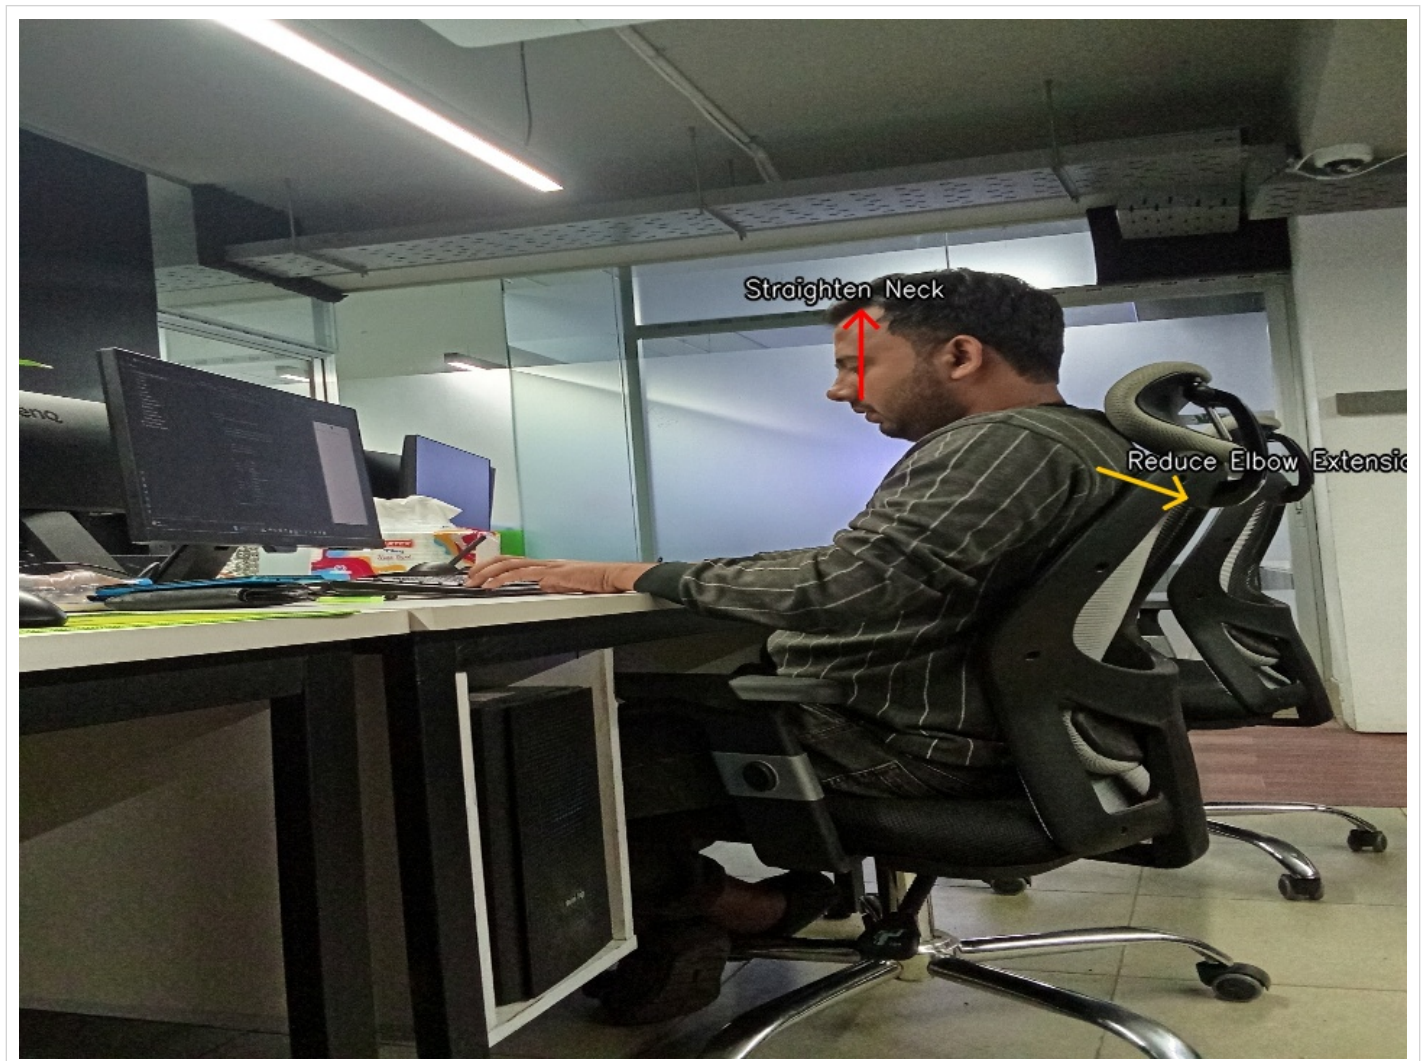

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, keep your chin parallel to the floor and look straight ahead.
- Correct Elbow Angle: Adjust your arm position so your elbows are bent at approximately 90–100°, close to your body, and your forearms are parallel to the floor.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending them up, down, or sideways.
- Upright Pelvis Alignment: Sit with your pelvis in a neutral position, avoiding excessive forward or backward tilt. Your hips should be level with or slightly higher than your knees.
- Raise Monitor Height: Elevate your monitor so the top of the screen is at or just below eye level. This will minimize the need to bend your neck forward.
- Adjust Chair Height and Armrests: Set your chair height so your elbows are at desk level and your forearms rest comfortably. Adjust armrests (if available) to support your arms without elevating your shoulders.
- Optimize Keyboard and Mouse Placement: Position your keyboard and mouse close to your body and at the same height as your elbows to maintain a neutral wrist and elbow posture.
- Support Pelvic Alignment: Use a lumbar support cushion or adjust your chair's lumbar support to help maintain a neutral pelvic tilt and support your lower back.

Final Advice

Your workstation setup is causing severe neck, upper back, and lower back strain, with high pain intensity and

symptoms of tingling and stiffness. Immediate ergonomic adjustments and regular exercises are strongly recommended. If pain persists or worsens, consult a healthcare professional.
