

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Red risk
- Wrist Deviation: Yellow risk
- Pelvic Tilt: Red risk

Workstation Analysis

- Chair: SeatDepth: Green risk

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, keep your chin parallel to the floor and your gaze straight ahead.
- Correct Elbow Angle: Adjust your arm position so your elbows are bent at approximately 90–100°, keeping your forearms parallel to the floor and close to your body.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or to the sides.
- Pelvic Alignment: Sit with your hips fully back in the chair and your pelvis neutral (not tilted forward or backward). Use the chair's backrest for support.
- Raise Monitor Height: Elevate your monitor so the top edge is at or just below eye level. This will reduce the need to bend your neck forward.
- Adjust Desk and Chair Height: Ensure your chair and desk allow your elbows to rest at a 90–100° angle, with your forearms parallel to the floor.
- Keyboard and Mouse Placement: Position your keyboard and mouse close to your body and at the same height as your elbows to minimize wrist deviation and shoulder strain.

Final Advice

Your current posture and workstation setup are causing severe neck and upper back strain, with high risk for musculoskeletal injury. Immediate ergonomic adjustments and regular exercises are essential. If pain persists or

worsens, consult a healthcare professional.
