

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Red risk
- Wrist Deviation: Red risk
- Pelvic Tilt: Yellow risk

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Keep your chin level and avoid bending your neck forward. Adjust your gaze so your eyes look straight ahead at the top third of your monitor.
- Correct Elbow Angle: Position your elbows at a 90–110° angle, close to your body. Avoid extending your arms forward or outward while typing or using the mouse.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms when typing or using the mouse. Avoid bending your wrists up, down, or sideways.
- Support Pelvic Alignment: Sit with your hips fully back in the chair and maintain a slight forward pelvic tilt. Use the chair's backrest to support your lower back.
- Raise Monitor Height: Elevate your monitor so the top edge is at or just below eye level. This will reduce the need to bend your neck forward.
- Adjust Keyboard and Mouse Position: Place your keyboard and mouse close to the edge of your desk and at elbow height. This will help maintain a neutral elbow and wrist position.
- Optimize Chair Support: Adjust your chair height so your feet are flat on the floor and your knees are at or slightly below hip level. Use lumbar support to maintain pelvic alignment.

Final Advice

Your assessment shows severe ergonomic risks, especially for your upper back, neck, wrists, and elbows. Immediate workstation adjustments and posture corrections are critical. If pain persists or worsens, consult a healthcare professional.
