

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Red risk
- Wrist Deviation: Red risk
- Pelvic Tilt: Yellow risk

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; keep your chin parallel to the floor and your gaze straight ahead.
- Correct Elbow Angle: Adjust your chair and desk so your elbows are bent at approximately 90–100°, with your forearms parallel to the floor and close to your body.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or to the sides.
- Optimize Pelvic Alignment: Sit with your hips and knees at roughly 90°, feet flat on the floor. Maintain a slight natural curve in your lower back.
- Raise Monitor Height: Elevate your monitor so the top edge is at or just below eye level, reducing the need to bend your neck forward.
- Adjust Chair and Desk Height: Modify your chair and desk so your elbows rest comfortably at a 90–100° angle, with forearms parallel to the floor.
- Reposition Keyboard and Mouse: Place your keyboard and mouse at elbow height and close enough to avoid reaching or bending your wrists.

Final Advice

Your workstation and posture present significant ergonomic risks, especially for your neck, upper back, and wrists. Immediate adjustments and equipment upgrades are strongly recommended. If pain persists or worsens, consult a healthcare professional.
