

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Red risk
- Wrist Deviation: Red risk
- Pelvic Tilt: Yellow risk

Workstation Analysis

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; keep your chin parallel to the floor and look straight ahead.
- Correct Elbow Angle: Adjust your sitting position so your elbows are bent at approximately 90–100°, with your forearms parallel to the floor and close to your body.
- Neutral Wrist Position: Keep your wrists straight and aligned with your forearms when typing or using the mouse. Avoid bending your wrists up, down, or sideways.
- Pelvic Alignment: Sit with your hips and knees at about 90°, feet flat on the floor. Avoid slouching or tilting your pelvis forward excessively.
- Raise Monitor Height: Elevate your monitor so the top edge is at or just below eye level. This will help reduce neck flexion and upper back strain.
- Adjust Chair and Desk Height: Set your chair height so your elbows are at desk level and your forearms are parallel to the floor. Ensure your feet are flat on the ground or on a footrest.
- Keyboard and Mouse Placement: Position your keyboard and mouse close to your body and at the same height as your elbows to maintain neutral wrist and elbow positions.

Final Advice

Your current posture and workstation setup present significant ergonomic risks, especially for your neck, upper back, and wrists. Immediate adjustments and consistent exercises are strongly recommended. If pain persists or worsens, consult a healthcare professional. Safety note: Perform all exercises gently and stop if you experience pain, numbness, or tingling.
