

## Ergonomics Evaluation Report

### Posture Analysis

---

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Red risk
- Wrist Deviation: Red risk
- Pelvic Tilt: Yellow risk

### Workstation Analysis

---

### Pain & Risk Summary

---

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

### Posture & Ergonomic Corrections

---

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Adjust your gaze so your eyes are level with the top third of the monitor, minimizing the need to bend your neck forward.
- Correct Elbow Angle: Position your elbows at a 90–110° angle by lowering your chair or raising your keyboard/mouse so your forearms are parallel to the floor and close to your body.
- Neutral Wrist Position: Keep your wrists straight and aligned with your forearms while typing or using the mouse. Avoid bending your wrists upward or sideways.
- Raise Monitor Height: Elevate your monitor so the top edge is at or just below eye level. Use a monitor riser or sturdy books to achieve a height increase of approximately 8–12 cm.
- Optimize Keyboard and Mouse Placement: Place your keyboard and mouse at elbow height and close to the edge of your desk to prevent overreaching and maintain neutral wrist and elbow positions.

### Final Advice

---

Your assessment indicates significant ergonomic risks, especially for your upper back, neck, wrists, and elbows. Prioritize adjusting your monitor height and arm positions, and consider ergonomic equipment to reduce strain. If pain persists or worsens, consult a healthcare professional.
