

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Yellow risk
- Wrist Deviation: Red risk
- Pelvic Tilt: Green risk

Workstation Analysis

- Chair: SeatDepth: Green risk

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; keep your chin parallel to the floor and look straight ahead.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing. Avoid bending your wrists upwards or sideways.
- Optimal Elbow Angle: Adjust your arm position so your elbows are bent at about 90–100°, close to your body, to reduce strain.
- Raise Monitor Height: Elevate your laptop screen or use an external monitor so the top of the screen is at or just below eye level, reducing neck flexion.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop to allow your wrists and elbows to remain in a neutral, relaxed position.

Final Advice

Your workstation setup is causing significant neck, upper back, and wrist strain, especially with high upper back pain. Prioritize raising your monitor, using an external keyboard and mouse, and performing recommended exercises regularly. If pain persists or worsens, consult a healthcare professional.
