

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Yellow risk
- Wrist Deviation: Yellow risk
- Pelvic Tilt: Yellow risk

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 5

Main Pain Region(s): Neck (VAS 8)

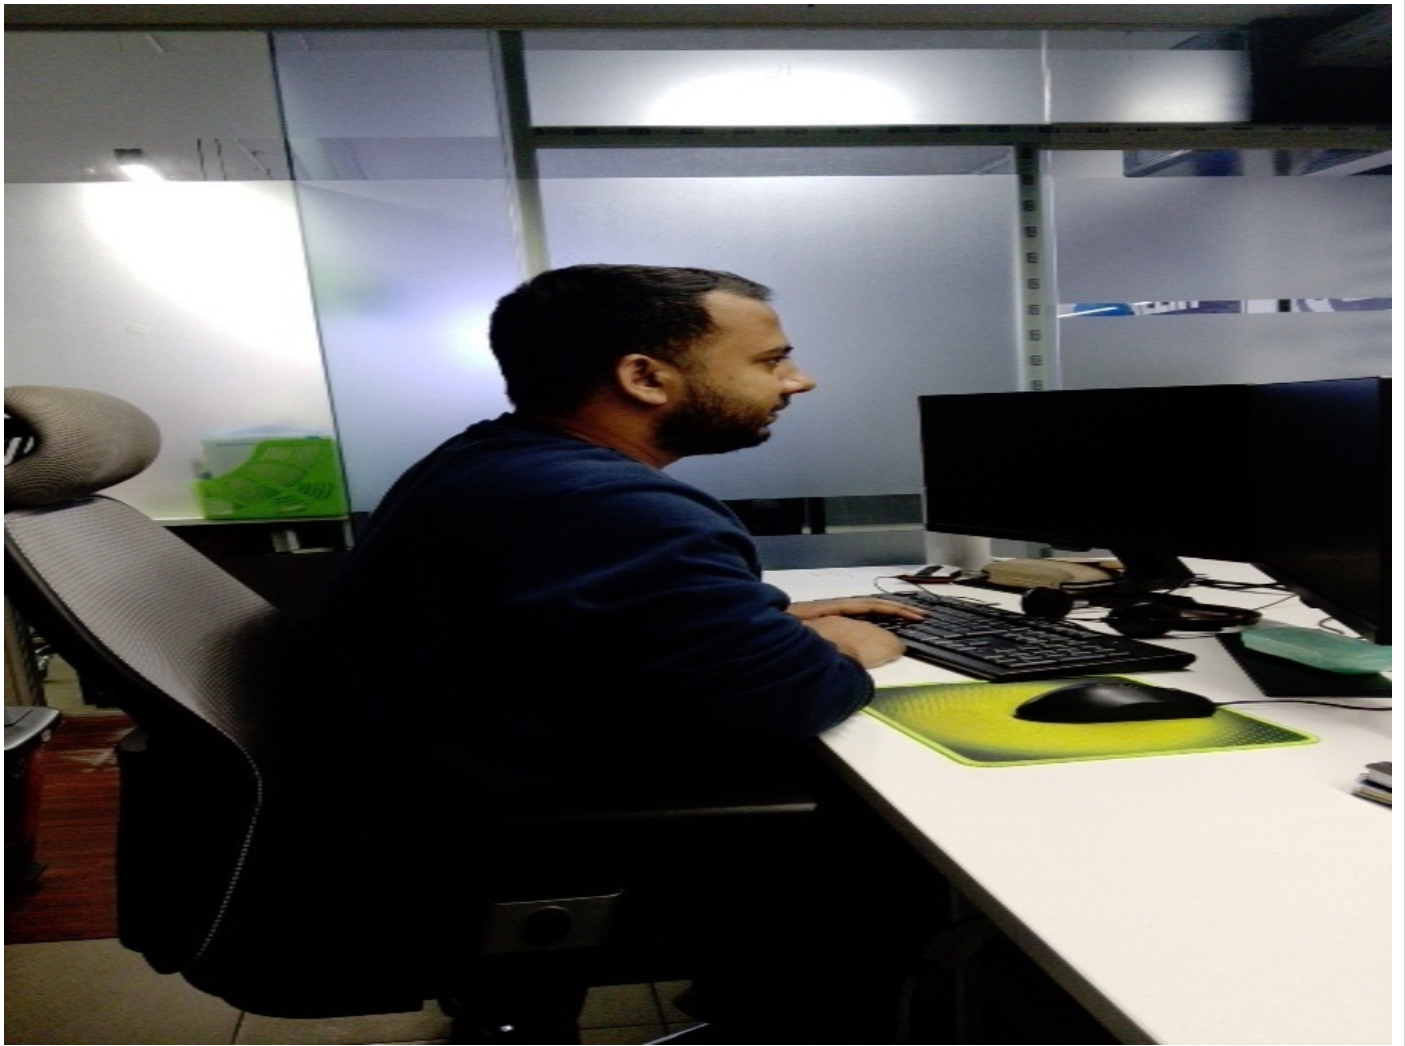

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, keep your chin parallel to the floor and your gaze straight ahead.
- Optimize Elbow Angle: Adjust your arm position so your elbows are bent at approximately 90°, close to your body, and your forearms are parallel to the floor.
- Minimize Wrist Deviation: Keep your wrists in a neutral, straight position while typing or using the mouse. Avoid bending them up, down, or sideways.
- Correct Pelvic Tilt: Sit with your hips fully back in the chair and your pelvis in a neutral position, maintaining the natural curve of your lower back.
- Raise Monitor Height: Elevate your monitor so the top of the screen is at or just below eye level. This will reduce the need to bend your neck forward.
- Adjust Chair Height: Set your chair height so your elbows are at desk level and your feet are flat on the floor or on a footrest.
- Align Keyboard and Mouse: Position your keyboard and mouse directly in front of you and at the same height to minimize wrist deviation and elbow strain.

Final Advice

Your current posture and workstation setup are causing significant neck and upper back strain, with high pain intensity reported. Immediate ergonomic adjustments and regular exercises are strongly recommended. If pain persists or worsens, consult a healthcare professional.
