

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk
- Shoulder Elevation: Green risk
- Elbow Angle: Yellow risk
- Wrist Deviation: Red risk
- Pelvic Tilt: Yellow risk

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 6

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

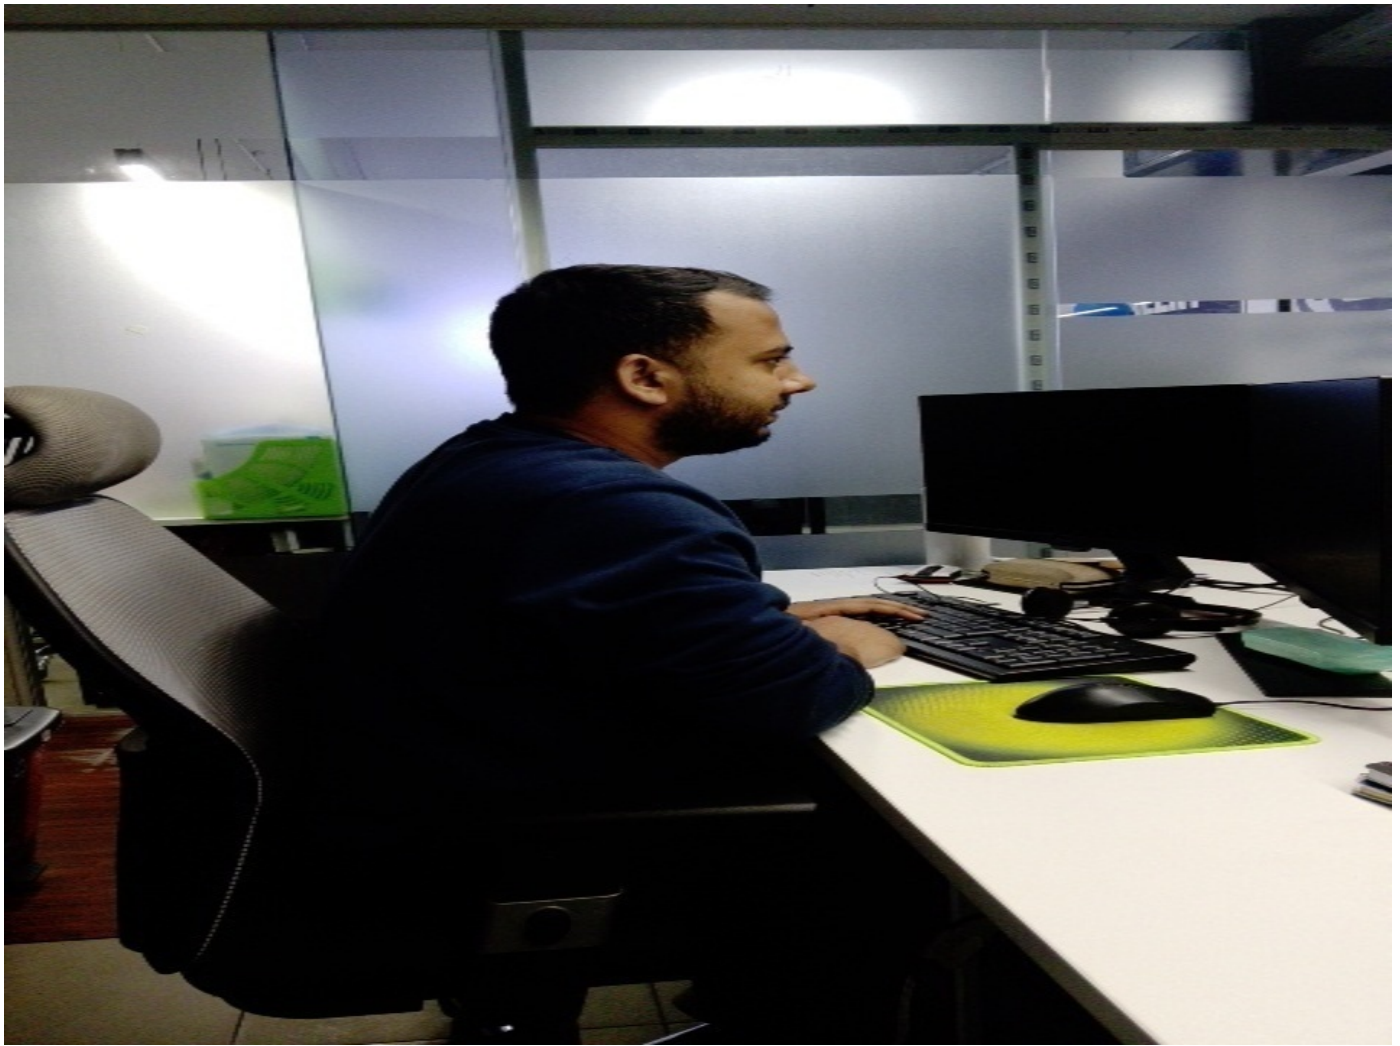

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, bring your screen up to eye level so your gaze is straight ahead.
- Neutral Wrist Position: Keep your wrists straight and level with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or to the sides.
- Open Elbow Angle: Adjust your chair and armrests so your elbows are at a 90–100° angle, close to your body, to reduce strain on your forearms and shoulders.
- Correct Pelvic Tilt: Sit with your hips fully back in the chair and your lower back supported. Your pelvis should be neutral, not tilted forward or backward.
- Raise Monitor Height: Elevate your monitor so the top edge is at or just below eye level. This will reduce the need to bend your neck forward.
- Adjust Keyboard and Mouse Position: Place your keyboard and mouse at elbow height and close to your body to keep your wrists straight and elbows at a comfortable angle.
- Support Lower Back: Add a lumbar cushion or adjust your chair's lumbar support to maintain the natural curve of your lower back and minimize pelvic tilt.

Final Advice

Your workstation and posture present significant ergonomic risks, especially for your neck, upper back, and wrists. Prioritize raising your monitor, using an ergonomic keyboard, and supporting your lower back. Perform the recommended exercises regularly and consider equipment upgrades to reduce pain and prevent further strain. If

pain persists or worsens, consult a healthcare professional.
