

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 8

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Adjust your gaze so your eyes are level with the top third of your monitor, minimizing the need to look down.
- Correct Elbow Angle: Position your elbows so they are bent at approximately 90–100°, close to your body, and avoid reaching forward. Adjust your chair height or keyboard position as needed.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or to the sides.
- Pelvic Alignment: Sit with your hips fully back in the chair, maintaining a slight forward tilt of the pelvis. Use lumbar support if needed to help maintain the natural curve of your lower back.
- Raise Monitor Height: Elevate your monitor so the top edge is at or just below eye level, reducing the need to flex your neck downward.
- Adjust Chair and Desk Height: Set your chair and desk so your elbows are at a 90–100° angle when typing, and your wrists remain straight.
- Keyboard and Mouse Placement: Place your keyboard and mouse close to the edge of your desk to avoid reaching and to keep your wrists in a neutral position.

Final Advice

Your assessment reveals significant ergonomic risks, especially for your upper back, neck, wrists, and lower back. Immediate workstation adjustments and posture corrections are recommended to reduce pain and prevent further strain. If pain persists or worsens, consult a healthcare professional.
