

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your ears aligned over your shoulders. Raise your screen so your eyes are level with the top third of the display to reduce neck bending.
- Neutral Wrist Alignment: Keep your wrists straight and in line with your forearms while typing. Avoid bending wrists up, down, or to the sides.
- Optimize Elbow Angle: Adjust your chair or desk so your elbows are bent at about 90–100°, close to your body, and your forearms are parallel to the floor.
- Elevate Laptop Screen: Use a monitor riser or stack books to raise your laptop screen to eye level, reducing neck flexion.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop to allow your wrists and elbows to remain in a neutral position.

Final Advice

Your upper back and wrist risks are elevated due to posture and workstation setup. Prioritize raising your screen and using external input devices to reduce pain and prevent further strain. Perform recommended exercises regularly and reassess your setup after adjustments.
