

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, keep your chin parallel to the floor and look straight ahead.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing. Avoid bending your wrists upward, downward, or to the sides.
- Optimize Elbow Angle: Adjust your chair or desk height so your elbows are bent at approximately 90–100 degrees, close to your body, to minimize strain.
- Raise Monitor Height: Elevate your laptop screen so the top is at or just below eye level. Use a monitor riser or stack books to achieve this, reducing the need to bend your neck.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Position them so your wrists remain straight and your elbows are at a comfortable angle.

Final Advice

Your workstation setup is causing significant neck, upper back, and wrist strain, especially given your reported pain levels and posture risks. Prioritize raising your screen, using external input devices, and performing the recommended exercises regularly. If pain persists or worsens, consult a healthcare professional.
