

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, keep your chin parallel to the floor and look straight ahead.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing. Avoid bending them upwards, downwards, or to the sides.
- Optimal Elbow Angle: Adjust your arm position so your elbows are bent at about 90–100°, close to your body, and not flaring outward.
- Raise Monitor Height: Elevate your laptop screen so the top edge is at or just below eye level. Use a monitor riser or stack books to achieve this.
- External Keyboard and Mouse: Use an external keyboard and mouse to allow your wrists and elbows to remain in a neutral, relaxed position while typing and mousing.

Final Advice

Your upper back and wrist risks are elevated due to posture and workstation setup. Prioritize monitor height and external input devices to reduce strain. Perform recommended exercises regularly and reassess pain if symptoms persist or worsen.
