

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head balanced directly over your shoulders. Avoid tilting your head forward; keep your chin parallel to the floor. Adjust your gaze so your eyes are level with the top third of your screen.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists upwards or sideways.
- Optimal Elbow Angle: Adjust your chair or desk so your elbows are bent at approximately 90–100°, close to your body, and your forearms are parallel to the floor.
- Raise Monitor Height: Elevate your laptop screen using a riser or external monitor so the top of the screen is at or just below eye level. This reduces neck flexion and strain.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Position them so your wrists remain straight and your elbows stay close to your body.

Final Advice

Your upper back pain is severe and your workstation setup is contributing to neck and wrist strain. Prioritize raising your screen and using external input devices. Perform the recommended exercises regularly, and consider consulting a healthcare professional if pain persists or worsens.
