

## Ergonomics Evaluation Report

### Posture Analysis

---

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Red

### Workstation Analysis

---

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

### Pain & Risk Summary

---

Average Pain Level: 6

Main Pain Region(s): Neck, Wrists/Hands, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

### Posture & Ergonomic Corrections

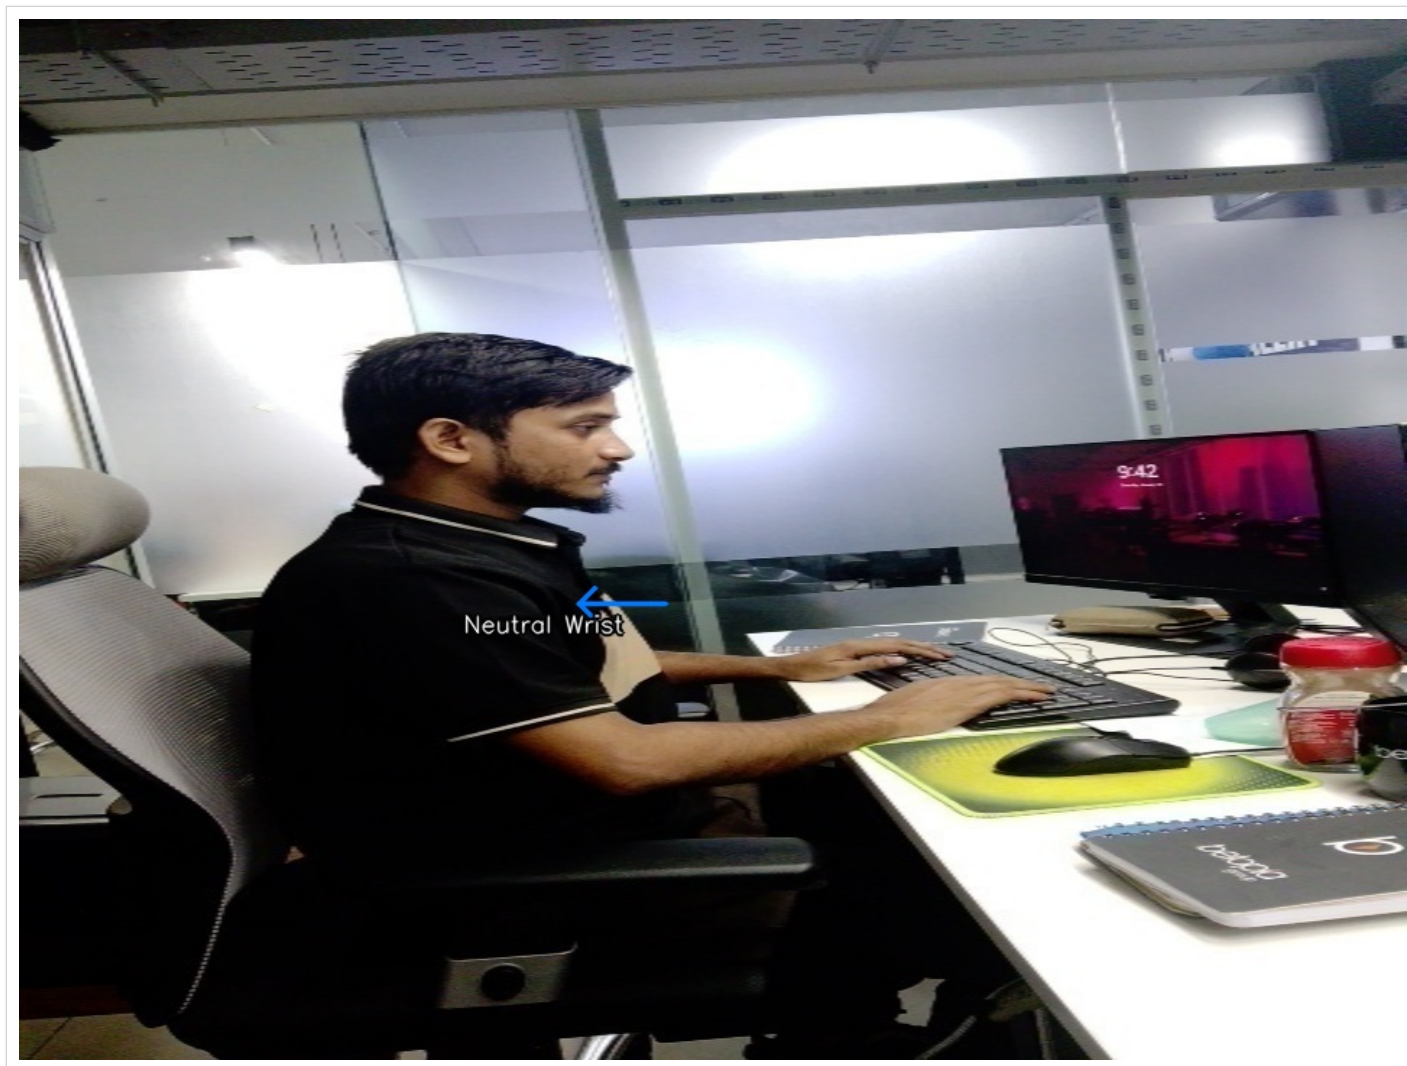

---

- Correct Wrist Alignment: Keep wrists in a straight, neutral position while typing. Avoid bending or deviating your wrists sideways. Adjust your hand placement so that your wrists remain flat and aligned with your forearms.
- Reduce Pelvic Tilt: Sit with your hips back in the chair and your pelvis in a neutral position. Use the chair's backrest for support, and avoid slouching or tilting your pelvis forward.
- Lower Shoulder Elevation: Relax your shoulders and keep them level. Adjust your armrests or desk height so your shoulders are not raised while typing or using the mouse.
- Raise Monitor Height: Position the top of your monitor at or slightly below eye level by using a monitor riser or stacking stable objects under your laptop. This will help maintain a neutral neck posture and reduce strain.
- Optimize Keyboard and Mouse Placement: Place your keyboard and mouse at elbow height and close to your body to minimize wrist deviation and shoulder elevation. Consider using an external keyboard and mouse if working on a laptop.

### Final Advice

---

Your workstation setup is causing significant strain, especially to your upper back and wrists. Prioritize raising your monitor, using an external keyboard and mouse, and supporting your lower back. Perform recommended exercises regularly and consider equipment upgrades to reduce pain and prevent further issues. If pain persists or worsens, consult a healthcare professional.
