

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 6

Main Pain Region(s): Neck, Wrists/Hands, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Correct Wrist Alignment: Keep wrists in a straight, neutral position while typing or using the mouse. Avoid bending wrists upwards or sideways. Adjust your hand placement so that your wrists remain flat and aligned with your forearms.
- Reduce Pelvic Tilt: Sit with your hips fully back in the chair and both feet flat on the floor. Use a lumbar support cushion if needed to maintain a slight natural curve in your lower back, reducing forward pelvic tilt.
- Relax Shoulders: Lower your shoulders and keep them relaxed, not elevated. Adjust your chair height or armrests so your shoulders are not hunched while typing.
- Raise Monitor Height: Elevate your laptop or monitor so the top of the screen is at or just below eye level. This will help you maintain a neutral neck posture and reduce strain.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Position them so your elbows are at about 90–100°, and wrists remain straight, reducing wrist deviation and shoulder elevation.

Final Advice

Your current setup poses significant ergonomic risks, especially for your upper back and wrists. Prioritize correcting wrist position and monitor height, and consider equipment upgrades for immediate relief. If pain persists or worsens, consult a healthcare professional.
