

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head balanced over your shoulders. Adjust your gaze so your eyes are level with the top third of your monitor, minimizing the need to tilt your head forward.
- Correct Elbow Angle: Position your elbows so they are bent at approximately 90–100°, close to your body, with forearms parallel to the floor. Avoid overextending your arms forward.
- Neutral Pelvic Position: Sit with your hips and knees at roughly 90°, feet flat on the floor. Avoid slouching or tilting your pelvis forward excessively.
- Raise Monitor Height: Elevate your monitor so the top edge is at or just below eye level. This will help reduce neck flexion and upper back strain.
- Adjust Chair and Desk Height: Ensure your chair and desk allow your elbows to rest at 90–100°, with forearms parallel to the floor and wrists straight while typing.
- Support Feet Properly: If your feet do not rest flat on the floor, use a footrest to provide stable support and reduce ankle/foot discomfort.

Final Advice

Your assessment shows significant ergonomic risks, especially for your neck, upper back, wrists/hands, and ankles/feet. Prioritize adjusting your monitor height and elbow position, and consider the recommended equipment to reduce pain and improve comfort. Perform the suggested exercises regularly, and take breaks every hour to further reduce strain.
