Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Yellow

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 6

Main Pain Region(s): Elbows/Forearms (VAS 8)

Posture & Ergonomic Corrections

- Correct Elbow Angle: Adjust your sitting position so that your elbows are bent at approximately 90–100°, with your forearms parallel to the floor and close to your body. Avoid overextending your arms forward while typing or using your mouse.
- Neutral Wrist Alignment: Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists upward, downward, or to the sides.
- Maintain Upright Pelvis: Sit with your pelvis in a neutral position, avoiding excessive forward or backward tilt. Your hips should be level with or slightly higher than your knees.
- Optimize Keyboard and Mouse Placement: Position your keyboard and mouse close to the edge of your desk and at elbow height to prevent overreaching and to maintain a relaxed elbow angle.
- Laptop Height Adjustment: Use a laptop stand or stack books to raise your laptop screen so the top of the screen is at or just below eye level. Use an external keyboard and mouse to maintain neutral wrist and elbow positions.

Final Advice

Your upper back pain is severe and your elbow posture is a high-risk concern. Please prioritize correcting your workstation setup and posture, and consider consulting a healthcare professional if pain persists or worsens.
